The true proof systems use color foils that are to be processed in separate units

(laminators), transferred from intermediate carriers onto production paper and/or laminated, either to protect the proof or to give it the appearance of the surface structure of production paper.

---

Press proof is a test print of the data directly on a printing press. This can be the press for the production run or a comparable press (using the same print technology) prepared especially for proof purposes.

### **Perfect Proofer - Print Proof Solutions**

The Perfect Proofer™ is an air driven device used to mimic flexographic presses. This ink proofing system systematically controls speed and

pressure, until it matches your particular press. Once that speed and pressure is identified, those settings become the press “signature”. You can configure a Perfect Proofing system to be suitable for the type of work done in your plant and compatible with the type of printing equipment you have in place.
