Theory and Practice of Optics and Refraction Nursesbooks.org Thomas Sowell's classic analysis of the opposing visions behind today's ethical and ideological disputes Controversies in politics arise from many sources, but the conflicts that endure for generations or centuries show a remarkably consistent pattern. This revised edition of a classic analyzes the centuries-long debates about the nature of reason, justice, equality, and power. It distinguishes between those with the "constrained" vision, which sees human nature as enduring and self-centered, and the "unconstrained" vision, in which human nature is malleable and perfectible. A Conflict of Visions offers a compelling case that these opposing visions are behind the ethical and ideological disputes of yesterday and today.

Odyssey Amer Academy of Pediatrics Pamphlet is a succinct statement of the ethical obligations and duties of individuals who enter the nursing profession, the profession's nonnegotiable ethical standard, and an expression of nursing's own understanding of its commitment to society. Provides a framework for nurses to use in ethical analysis and decision-making.

Bates Telemedicine"the use of information and telecommunications technologies to provide and support health care when distance separates the participants" is receiving increasing attention not only in remote areas where health care access is troublesome but also in urban and suburban locations. Yet the benefits and costs of this blend of medicine and digital technologies must be better demonstrated before today's cautious decision-makers invest significant funds in its development. Telemedicine presents a framework for evaluating patient care applications of telemedicine. The book identifies managerial, technical, policy,</p>
---	--	--

<p>legal, and human factors that must be taken into account in evaluating a telemedicine program. The committee reviews previous efforts to establish evaluation frameworks and reports on results from several completed studies of image transmission, consulting from remote locations, and other telemedicine programs. The committee also examines basic elements of an evaluation and considers relevant issues of quality, accessibility, and cost of health care. Telemedicine will be of immediate interest to anyone with interest in the clinical application of telemedicine.</p> <p><u>Procedures for Testing Color Vision</u></p> <p>Scholastic Inc.</p> <p>OVER 1 MILLION COPIES SOLD! Test Chart Books
Features:* Accepted by leading authorities as a simple and accurate method for discovering congenital color blindness and red-

green blindness, each in two forms, complete and incomplete.* Includes four special plates for tests to determine the kind and degree of defect in color vision.* Makes use of the peculiarity that in red-green blindness, blue and yellow appear remarkably bright compared with red and green.* Consist of a number of colored plates.* On each plate is printed a circle made of many different sized dots of slightly different colors, spread in a random manner.* Within the dot pattern, and differentiated only by color, is a number.* What, or even if, a number is visible indicates if and what form of color blindness the viewer has.* The full test consists of thirty-eight plates, but the existence of a deficiency may be clear after fewer plates.* The Ishihara Color charts are accepted by leading authorities worldwide as a simple and accurate test method.* Color plates encased in specially designed album-type books for ease of handling.* Detailed instructions included.

What is colorblindness? * Color blindness (color vision deficiency) is a condition in which certain colors cannot be distinguished, and is most commonly due to an inherited condition. Red/Green color blindness is by far the most common (99%) form and causes problems in distinguishing reds and greens. Another color deficiency Blue/Yellow also exists, but is rare (1%) and there is no commonly available test for it. * There is no treatment for color blindness, nor is it usually the cause of any significant disability. However, it can be very frustrating for individuals affected by it. Those who are not color blind seem to have the misconception that color blindness means that a color blind person sees only in black and white or shades of gray. While this sort of condition is possible, it is extremely rare.* The Ishihara color test is a test for color blindness* It was named after its designer, Dr. Shinobu Ishihara (1879-1963), a professor at the University of Tokyo, who first published his tests in 1917.* It makes use of the peculiarity that in red-

green blindness, blue and yellow appear remarkably bright compared to red and green.* It consists of a number of colored plates, on each plate is printed a circle made of many different sized dots of slightly different colors, spread in a random manner. Within the dot pattern, and differentiated only by color, is a number. What, or even if, a number is visible indicates if and what form of color blindness the viewer has.* The full test consists of thirty-eight plates, but the existence of a deficiency is usually clear after fewer plates.* The Ishihara Color Charts are accepted by leading authorities worldwide as a simple and accurate test method. * The color plates are available in an album-type book for ease of handling. The books are printed in Japan and are protected by international copyright.
