Probability and Statistics are not the same either. They are related, but much more circuitously than as Hooke's Law (above) relates stress with strain. Probability can be viewed either as the long-run frequency of occurrence or as a measure of the plausibility of an event given incomplete knowledge – but not both.

Engineering statistics. Engineering statistics involves data concerning manufacturing processes such as: component dimensions, tolerances, type of material, and fabrication process control. There are many methods used in engineering analysis and they are often displayed as histograms to give a visual of the data as opposed to being just numerical.

probability and statistics, together with the pitfalls that can arise from their misuse. Dr. Hayter collaborates on many research projects, including work to improve wheelchair designs and to provide better assistive technologies to disabled people.

This class covers quantitative analysis of uncertainty and risk for engineering applications. Fundamentals of probability, random processes, statistics, and decision analysis are covered, along with random variables and vectors, uncertainty propagation, conditional distributions, and second-moment analysis. System reliability is introduced.
