Kumon's Word Problems Workbooks develop the skills necessary for children's success using math inside and outside the

classroom. Our unique step-by-step progression introduces children to a wide variety of word problems that inspire critical thinking. Grade 4 Word Problems focuses on word problems that cover the following topics Division Decimals Using Formulas Mixed Calculations Tables and Graphs Primarily Problem Solving Penguin This book includes 50 situations that present interesting opportunities and challenges to stimulate students' creative and critical thinking. The brief, practical, everyday situations provide motivating starting points for practicing Creative Problem Solving with groups of many ages. These problems were designed to represent a variety of different tasks or challenges in an open-ended, invitational format that we describe informally as a "Messy Situation." These Messy Situations, like many of life's everyday

opportunities and challenges, take a variety of forms, sizes, and shapes. They might concern a variety of situations in which people find themselves day in and day out. Thus, some of the Messy Situations in this book are people tasks (that is, situations involving the interactions or relationships among people). Others are planning tasks (that is, concerning more effective ways of organizing or managing a situation), and yet others are product tasks (that is, challenges that call for designing, inventing, or producing a new product of some kind). Each of these one-page problems can help students learn and apply CPS components, stages, and tools in an engaging and enjoyable way. Choose the problems that are best suited to your group's interests and needs. The challenges in Practice Problems for Creative Problem Solving and several helpful worksheets are reproducible for classroom use. Grades 3-8

Aplusphysics Kumon Math Workbooks The six books in the 'Maths Problem Solving' series have been written for teachers to use during the numeracy lesson. They cover the 'solving problems' objectives from the numeracy framework. There is one book for each year group. The Year 4 book contains clear photocopiable resources organized into three chapters; Making decisions, Reasoning about numbers or shapes, Problems

involving 'real life', and money or measures. Each chapter contains six lessons, one to be used each half term. The length of the problems in each book vary with short, medium and more extended problems for the children to solve. The problems on each page are mixed so the children do not assume that the solution process is the same each time but have to understand the problem. The problems are varied in their complexity. Some are one-step problems, other two-step and the vocabulary differs in each problem. The problems are presented in a meaningful, age-appropriate manner with topics the children will find relevant. They will be motivated to find the answer.

This text, written by the co-developers of PST, is a comprehensive and detailed manual of how to apply PST to a wide variety of populations and situations. It reflects the significant conceptual and clinical revisions that supersede earlier versions of PST, and is based on the authors' clinical and research experience, the treatment outcome literature, and advances in related areas of psychology and neuroscience research. The book offers specific treatment guidelines, sample client-therapist dialogues, clinical exercises and activities, homework assignments, client handouts, clinical

case examples, and worksheets.
