Enhancing Instructional Problem Solving National Academies Press

In his 1997 State of the Union address, President Clinton announced a federal initiative to develop tests of 4th-grade reading and 8th-grade mathematics that would provide reliable information about student performance at two key points in their educational careers. According to the U.S. Department of Education, the Voluntary National Tests (VNT)

would create a catalyst for continued school improvement by focusing parental and community-wide attention on achievement and would become new tools to hold school systems accountable for their students' performance. The National Assessment Governing Board (NAGB) has responsibility for development of the VNT. Congress recognized that a testing program of the scale and magnitude of the VNT initiative raises many important technical questions and requires quality control throughout development and implementation. In P.L. 105-78, Congress called on the National Research Council (NRC) to evaluate a series of technical issues pertaining to the validity of test items, the validity of proposed links between the VNT and the National Assessment of Educational Progress (NAEP), plans for the accommodation and inclusion of students with disabilities and English-language learners, plans for reporting test information to parents and the public, and potential uses of the tests. This report covers phase 1 of the evaluation (November

---

1997-July 1998) and focuses on three principal issues: test specifications and frameworks; preliminary evidence of the quality of test items; and plans for the pilot and field test studies, for inclusion and accommodation, and for reporting VNT results.

Closer Reading, Grades 3-6 Springer Science & Business Media

To address Common Core State Standards (CCSS) for reading and language, today 's educators strive to help their students develop higher-level understanding with challenging materials. In this book, we share our method for implementing an integrated strategy approach for helping readers understand expository text. This approach can be used to accompany and extend text structure instruction on the five most commonly

used expository text structures: compare and contrast, cause and effect, problem and solution, description, and sequence. Within this approach, we designed a method for using key vocabulary in a way that helps readers think about the structure of the text. To aid in the development of higher-level understanding with challenging materials, this approach integrates other essential reading comprehension components that foster understanding, such as predicting and summarizing. The Structure Sort integrated approach embeds these essential strategies before, during, and after reading to empower students to make connections and build comprehension at all stages of reading.

Sheila Rae is older, she doesn't always know better! This classic picture book about overcoming fear is written and illustrated by Kevin Henkes, the nationally bestselling and celebrated creator of Lilly's Purple Plastic Purse, Owen, and Kitten's First Full Moon. "I am very brave," Sheila Rae said, patting herself on the back. She wasn't afraid of anything—not thunder, not lightning, not the big black dog at the end of the block. And when she wanted to walk home a new way and Louise wouldn't, she called her sister a scaredy-cat and set out alone. But all the bravado in the world failed to help when Sheila Rae found herself lost. Luckily, her sister was not far behind. "Children will love it."—School Library Journal

Reading Comprehension, Grade 4 Center

This volume represents a beginning effort to compile a history of educational psychology. The project began, innocuously enough, several years ago when we decided to add mon material about the history of educational psychology to the undergraduate course we were teaching. What seemed like a simple task became very

complex as we searched in vain for a volume dealing with the topic. We ended up drawing on various histories of psychology that devoted anywhere from a few paragraphs to several pages to the topic and on a very few articles addressing the issue. We were startled, frankly, by the apparent lack of interest in the history of our field and decided to attempt to compile a history ourselves. As is the case with any edited volume, the contributing authors deserve credit for its positive features. They uniformly made every effort asked of them and taught us much about educational psychology. Any errors or omissions are our responsibility alone.

Tales of a Fourth Grade Nothing Harry N. Abrams

The National Assessment of Educational Progress' (NAEP) 1992 reading assessment was administered to nationally representative samples of fourth-, eighth-, and twelfth-grade students attending public and private schools, and to state representative public-school samples of fourth graders in 43 jurisdictions. Nearly 140,000

students were assessed in all. Data were summarized on the NAEP reading proficiency scale ranging from 0 to 500, and results were reported according to three achievement levels at each grade--basic, proficient, and advanced. Major findings were that (1) 59% of the fourth graders, 69% of eighth graders, and 75% of twelfth graders reached the basic level or beyond; (2) 25%, 28%, and 37% of grade 4, 8, and 12 students met or exceeded the proficient level, respectively; (3) from 2% to 4% of students at any of the grade levels achieved the "advanced" performance level; (4) fourth graders within the basic level generally understood simple narratives; (5) eighth graders reading within the basic level demonstrated literal understanding of passages; (6) twelfth graders within the basic level were able to interpret aspects of the passages they read and make connections between their reading and their own knowledge; (7) students attending private schools had higher average reading proficiency than students at public schools; (8) considerable variation in performance existed within and across participating states; (9) females had higher average reading proficiency than males at all three grade levels; and (10) fourth graders appeared to be learning reading through varied instructional approaches. (Contains 67 tables and 9 figures of data; a detailed description of anchoring the achievement levels, an overview of procedures, state contextual background factors, and reading passages are attached.)
