Handbook of Drug Administration via Enteral Feeding Tubes, 3rd edition Lippincott Williams & Wilkins

By the end of 1997, more than 1.3 million new cases of cancer will be diagnosed, and it is estimated that two of every three American families will at some time have at least one family member diagnosed with cancer. The current trend towards earlier discharge from acute care hospitals and an expected increase in home care may result in more adult children becoming involved in caring for a

physically dependent parent. Furthermore, advances in cancer treatment have led to increased survivorship, which in turn has led to caregiving demands that many exist for several months to years. Family caregiving requires adjustments in daily schedules, imposes financial burdens, and causes the individual members to re-evaluate their relationships with the patient. The book is intended to raise awareness of the stresses evoked by a caregiving relationship.

This monograph gathers and evaluates data on adverse events (AEs) associated specifically with those “biomedicines” – monoclonal antibodies, fusion proteins, and cytokines – that have recently entered therapeutic use in humans. All AEs observed when using each member of this new drug class are covered, with a view to improving understanding of pathogenesis, facilitating prevention, monitoring, and control, and contributing to the development of better drugs that provide benefits while minimizing risk. Further aspects here examined include the role of drug mechanisms of action and immunogenicity in relation to AEs outcome and induction of systemic syndromes. Additional data on AEs in off-label treatments are also considered. Electronic data sheets, downloadable from Springer Extra Materials platform, include more detailed safety data as well as additional basic information on product characteristics, pre- and

post-marketing AEs classified according to frequency, and system/organ targeting. Data on excipients and selected information on drug interactions and associations are also provided.

Adverse Events with Biomedicines: Prevention Through Understanding will serve as a detailed, practical guideline to this important new area, which demands the attention of clinicians, immunologists, oncologists, allergologists, public health professionals, and drug companies.
