All papers have in common that they relate translation research to aspects of comprehensibility addressing them from several different perspectives, such as source text defects, quality ensurance during text production, or evaluation of comprehensibility in the target text.

Medical Toxicology CRC Press

By the end of 1997, more than 1.3 million new cases of cancer will be diagnosed, and it is estimated that two of every three American families will at some time have at least one family member diagnosed with cancer. The current trend towards earlier discharge from acute care hospitals and an expected increase in home care may result in more adult children becoming involved in caring for a physically dependent parent. Furthermore, advances in cancer treatment have led to

---

increased survivorship, which in turn has led to caregiving demands that many exist for several months to years.

Family caregiving requires adjustments in daily schedules, imposes financial burdens, and causes the individual members to re-evaluate their relationships with the patient. The book is intended to raise awareness of the stresses evoked by a caregiving relationship.

This monograph gathers and evaluates data on adverse events (AEs) associated specifically with those “biomedicines” – monoclonal antibodies, fusion proteins, and cytokines – that have recently entered therapeutic use in humans. All AEs observed when using each member of this new drug class are covered, with a view to improving understanding of pathogenesis, facilitating prevention, monitoring, and control, and contributing to

---

the development of better drugs that provide benefits while minimizing risk. Further aspects here examined include the role of drug mechanisms of action and immunogenicity in relation to AEs outcome and induction of systemic syndromes. Additional data on AEs in off-label treatments are also considered. Electronic data sheets, downloadable from Springer Extra Materials platform, include more detailed safety data as well as additional basic information on product characteristics, pre- and post-marketing AEs classified according to frequency, and system/organ targeting. Data on excipients and selected information on drug interactions and associations are also provided. Adverse Events with Biomedicines:

Prevention Through Understanding will serve as a detailed, practical guideline to this important new area, which demands the attention of clinicians, immunologists, oncologists, allergologists, public health professionals, and drug companies.

caregivers....[This book] provides the reader with valuable knowledge that will diminish suffering and enrich the lives of people confronting new, often frightening, problems." From the Foreword by Ronald Melzack, PhD, FRSC Professor Emeritus McGill University "This is a well-written and concise book....Nurses and other healthcare professionals will certainly find this book a useful resource for understanding and managing geriatric pain."--Clinical Nurse Specialist

Older adults can be especially susceptible to the debilitating effects of chronic pain, yet there are often barriers to successfully alleviating pain on the part of elderly patients and the health care professionals who treat them. This comprehensive guide to geriatric pain management provides the most current information available on assessment and treatment of pain in older adults. In a concise, reader-friendly format, the book provides techniques, tips, and tools for assessing pain and examines barriers to appropriate treatment. It addresses the physiological and psychosocial factors underlying the process and occurrence of pain and helps nurses to develop a comprehensive multimodal approach to pain management that includes pharmacological and nonpharmacological interventions. The guide provides detailed coverage of medications commonly used for pain management, including all contraindications and side effects, so that nurses will be able to evaluate the best use of a medication in the context of comorbidities and sensitivities of each individual. Also addressed are chronic illnesses common to the elderly population, palliative and hospice care, treatment of concurrent depression and anxiety, treatment of cognitively impaired elderly, and techniques for assessment and intervention in cases of substance abuse. This volume covers all aspects of the antibiotic discovery and development process through Phase II/III. The contributors, a group of highly experienced individuals in both academics and industry, include chapters on the need for new antibiotic compounds, strategies for screening for new antibiotics, sources of novel synthetic and natural antibiotics, discovery phases of lead development and optimization, and candidate compound nominations into development. Beyond discovery, the handbook will cover all of the studies to prepare for IND submission: Phase I (safety and dose ranging), progression to Phase II (efficacy), and Phase III (capturing desired initial

indications). This book walks the reader through all aspects of the process, which has never been done before in a single reference. With the rise of antibiotic resistance and the increasing view that a crisis may be looming in infectious diseases, there are strong signs of renewed emphasis in antibiotic research. The purpose of the handbook is to offer a detailed overview of all aspects of the problem posed by antibiotic discovery and development.
