Theory of Structures

From Carnegie Medal finalist Jenny Valentine comes a bold new story about the boundlessness of love and second chances, perfect for fans of David Levithan's Every Day. Jude doesn't believe in love, or magic. Life is little more than ordinary. That is, until Jude's mother loses her job and moves them to a little town by the sea to live with Henry Lake--an eccentric old man with rooms to rent. Henry is odd, the town is dull, and worst of all, Jude feels out of place and alone. So when Novo turns up in the house across the street, dressed all in black and looking

unbearably handsome, Jude's summer takes an immediate turn for the better. But Novo isn't all that he seems to be--or maybe he's more than Jude can possibly understand. Novo is pure magic--someone who can bend and stretch the bounds of time. Someone who wakes up in different places and at different points in history with utter regularity. He knows that each Now is fleeting, that each moment is only worth the energy it expends on itself, and that each experience he has will be lost to him before long. But Jude and Novo form a bond that shifts reality for both of them. Jude begins to question what forever really means--only to find out that Novo knows that

forever isn't real. And when things go horribly wrong, Jude and Novo are faced with an impossible question that may change both of their lives irreparably--what is worth sacrificing for love? A stunningly written, compelling exploration of the universality of love--and what it means to live in the moment--that quite literally defies both logic and time. A love story without borders that reflects the best of our modern world. Praise for Hello Now: * "Babbitt's Tuck Everlasting revised as a passionate YA love story, this is an exquisitely told romantic fantasy, golden yet lacerating." --BCCB, **STARRED REVIEW** **Highway Engineering** KHANNA PUBLISHING

The materials are of interest to all scientists and engineers. In modern days, the

sophistication of materials is tremendously increased which has resulted in the implications for advanced engineering and technology. Its implications have benefitted the common man too. All sections of the industry such as fitter, motor mechanic, manufacturers, fabricators, welders etc. are keenly feeling the necessity of new materials. The main objective of this book is to provide general information of science of materials regarding important relationship between structure of metal and its properties. This knowledge will help the engineers to design and synthesise the new materials with required properties. Electronic Devices and Circuits New Academic Science Computer Fundamentals and Programming in C is

designed to serve as a textbook for the undergraduate students of engineering, computer science, computer applications, and information technology. This book is intended to serve as a text on dynamics for undergraduate students of engineering. The book provides in-depth discussions of the fundamentals of Newtonian mechanics, more commonly known as dynamics. Drawing on the author's extensive experience in teaching the subject of dynamics at two Indian Institutes of Technology (IITs) and the Indian Institute of Engineering Science and Technology (IEST), the book contains 498 line diagrams, 123 worked-out examples and 222 exercise problems. The answers to select exercise problems are provided at the end of the book. A wealth of detailed illustrations make the book ideally suited for both self self-study and classroom use at both introductory and secondary levels. Thus the book offers a valuable resource for both students and teachers of dynamics, addressing the main topics

covered in core level courses on ' Dynamics ' for students of civil, mechanical and aerospace engineering across the globe.

This text is meant to fill a long felt need for a comprehensive and authoritative book on heat and mass transfer for students of Mechanical/Chemical/Aeronautical/Production/ Metallurgical engineering. The dual objective of understanding the physical phenomena involved and the ability to formulate and solve typical problems by an average student has been kept in mind while writing this book. In this text, an effort has been made to identify the similarities in both qualitative and quantitative approach, between heat transfer and

mass transfer. This gives a better understanding of the phenomena of mass transfer. The subject matter has been developed to a sufficiently advanced stage in a logical and coherent manner with neat illustrations along with an adequate number of solved examples. A large number of problems (with answers) at the end of each chapter assist in the pedagogy. The book has been appended with a set of selected MCQs. The role of experimentation in the teaching of Heat and Mass Transfer is well established. Properly designed experiments reinforce the teaching of basic principles more thoroughly. Keeping this in mind one full chapter comprising 12 typical experiments forms another special feature of this text. Contents: Basic Concepts Fundamental Equations of

Conduction One-Dimensional Steady State Heat Conduction Multi-Dimensional Steady State Conduction Transient Heat Conduction Fundamentals of Convective Heat Transfer Forced Convection Systems Natural Convection Thermal Radiation - Basic Relations Radiative Heat Exchange Between Surfaces Boiling and Condensation Heat Exchangers Diffusion Mass Transfer Convective Mass Transfer Experiments in Engineering Heat and Mass Transfer.

Mechanical Processing of Materials New Age International

This book comprises selected papers from the International Conference on Numerical Heat Transfer and Fluid Flow (NHTFF 2018), and presents the latest developments in computational methods in heat and mass transfer. It also

“ Though ours is an age of high technology, the essence of what engineering is and what engineers do is not common knowledge. Even the most elementary of principles upon which great bridges, jumbo jets, or super computers are built are alien concepts to many. This is so in part because engineering as a human endeavor is not yet integrated into our culture and intellectual tradition. And while educators are currently wrestling with the problem of introducing technology into conventional academic curricula, thus better preparing today ’ s students for life in a world increasingly technological, there is as yet no consensus as to how technological literacy can best be achieved. ” I believe, and I argue in this essay, that the ideas of engineering are in fact in our bones and part of our human nature and experience.

Furthermore, I believe that an understanding and an appreciation of engineers and

engineering can be gotten without an engineering or technical education. Thus I hope that the technologically uninitiated will come to read what I have written as an introduction to technology. Indeed, this book is my answer to the questions 'What is engineering?' and 'What do engineers do?'" - Henry Petroski, *To Engineer is Human*
