Finally, the solution to the #1 reason we don ' t
exercise: time. Everyone has one minute. A decade
ago, Martin Gibala was a young researcher in the field
of exercise physiology—with little time to exercise.
That critical point in his career launched a passion for
high-intensity interval training (HIIT), allowing him to
stay in shape with just a few minutes of hard effort. It
also prompted Gibala to conduct experiments that
helped launch the exploding science of ultralow-
volume exercise. Now that he ' s the worldwide guru
of the science of time-efficient workouts, Gibala ' s
first book answers the ultimate question: How low can
you go? Gibala ' s fascinating quest for the answer
makes exercise experts of us all. His work
demonstrates that very short, intense bursts of
exercise may be the most potent form of workout
available. Gibala busts myths (" it ' s only for really fit
people "), explains astonishing science (" intensity
trumps duration "), lays out time-saving life hacks
(" exercise snacking "), and describes the fascinating
health-promoting value of HIIT (for preventing and
reversing disease). Gibala ' s latest study found that
sedentary people derived the fitness benefits of 150
minutes of traditional endurance training with an
interval protocol that involved 80 percent less time
and just three minutes of hard exercise per week.
Including the eight best basic interval workouts as
well as four microworkouts customized for individual
needs and preferences (you may not quite want to go
all out every time), *The One-Minute Workout* solves
the number-one reason we don ' t exercise: lack of
time. Because everyone has one minute.

cutting techniques. Safety considerations are discussed, including
workplace safety, occupational hazards, kick-back and identifying
dangerous trees. An explanation of the 'tension' and 'compression'
forces in timber is also provided to help you understand where to
begin cutting to avoid jamming the saw. The book covers
chainsaw maintenance in detail, explains all aspects of the
equipment and helps you select the right chainsaw and personal
protection equipment for your needs. Trouble-shooting charts are
included to help you solve operating problems. This manual has

classifiers or measure words (simplified Chinese: traditional Chinese: pinyin:

liangci) are used along with numbers to define the quantity of a given object, or with demonstratives such as "this" and "that" to identify specific objects. Classifiers are bound morphemes: they do not have any meaning by themselves and are always used in conjunction with a noun or another content word. Whenever a noun is preceded by a number or a demonstrative, a classifier must come in between. The choice whether to use a number or demonstrative at all, however, is up to the speaker; classifiers may often be avoided by simply using a bare noun. Phrases consisting of a number, a classifier, and a noun, such as (yi ge ren, one- person), are known as "classifier phrases." Some linguists have proposed that the use of classifier phrases may be guided less by grammar and more by stylistic or pragmatic concerns on the part of a speaker who may be trying to...

This study of the interaction of syntax, pragmatics, and prosody in left peripheral positions focuses on two left dislocation constructions in Czech, Hanging Topic Left Dislocation and Contrastive Left Dislocation. The structure of the left periphery is delineated through a thorough description and analysis of these constructions with respect to their syntactic behavior, discourse function and prosody. Following recent work on the Syntax-Phonology interface, prosody in these constructions is shown to interact in interesting ways with the narrow syntax. Unexpected patterns of left-edge resumption are explained through the role of the PF component of the grammar.

Gathered from the popular website www.StellaAwards.com, The True Stella Awards is an outrageous collection of America's most frivolous lawsuits Named for Stella Liebeck, the woman who won a multimillion-dollar lawsuit after spilling hot McDonald's coffee on herself, humorist Randy Cassingham's popular website chronicles the hard-to-believe and amusing claims brought before the U.S. courts. The most ridiculous of these lawsuits are given the "honorable" Stella Award. In The True Stella Awards, Cassingham documents the most outlandish of these real-life cases, including: * The man who legally changed his name to Jack Ass, and then sued MTV because their TV show and movie Jackass infringed on his trademark and demeaned his "good name" * The songwriter who left a minute's silence on his record only to be sued by the estate of another songwriter who copyrighted his own "silent" song * The man who sued an amusement park after being the victim of the ultimate "act of God": He was hit by lightning while standing next to his own car in the parking lot Stunning and hilarious, The True Stella Awards reveals the extremes people will go to in the pursuit of "justice."

Using Lady Morgan's *The Wild Irish Girl* as his point of departure, Thomas J. Tracy argues that nineteenth-century debates over what constitutes British national identity often revolved around representations of Irishness, especially Irish womanhood. He maps the genealogy of this development in fiction, political discourse, and the popular press, from Edgeworth's *Castle Rackrent* through Trollope's Irish novels, focusing on the pivotal period from 1806 through the 1870s.

This book covers anaphora resolution for the English language from a linguistic and computational point of view. First, a definition of anaphors that applies to linguistics as well as information technology is given. On this foundation, all types of anaphors and their characteristics for English are outlined. To examine how frequent each type of anaphor is, a corpus of different hypertexts has been established and analysed with regard to anaphors. The most frequent type are non-finite clause anaphors - a type which has never been investigated so far. Therefore, the potential of non-finite clause anaphors are further explored with respect to anaphora resolution. After presenting the fundamentals of computational anaphora resolution and its application in text retrieval, rules for resolving non-finite clause anaphors are established. Therefore, this book shows that a truly interdisciplinary approach can achieve results which would not have been possible otherwise.
