**Requirements by Collaboration: Workshops for Defining Needs** focuses on the human side of software development--how well we work with our customers and teammates.

Experience shows that the quality and degree of participation, communication, respect, and trust among all the stakeholders in a project can strongly influence its success or failure.

Ellen Gottesdiener points out that such qualities are especially important when defining user requirements and she shows in this book exactly what to do about that fact. Gottesdiener shows specifically how to plan and conduct requirements workshops. These carefully organized and facilitated meetings bring business managers, technical staff, customers, and users into a setting where, together, they can discover, evolve, validate, verify, and agree upon their product needs.

Not only are their requirements more effectively defined through this collaboration, but the foundation is laid for good teamwork throughout the entire project. Other books focus on how to build the product right.

**Requirements by Collaboration** focuses instead on what must come first--the right product to build.

Portals present unique strategic challenges in the academic environment. Their conceptualization and design requires the input of campus constituents who seldom interact and whose interests are often opposite. The implementation of a portal requires a coordination of applications and databases controlled by different campus units at a level that may never before have been attempted at the institution. Building a portal is as much about constructing intra-campus bridges as it is about user interfaces and content.

**Designing Portals:**

**Opportunities and Challenges** discusses the current status of portals in higher education by providing insight into the role portals play in an institution's business and educational strategy, by taking the reader through the processes of conceptualization, design, and implementation of the portals (in different stages of development) at major universities and by offering insight from three producers of portal software systems in use at institutions of higher learning and elsewhere.

Conventional thinking has brands trying to give customers what they want. But what if wanting is no longer enough? A customer may want a great mobile phone, for example, and there are many options. But a

huge majority will choose the now iconic iPhone, even waiting long hours in lines to purchase the latest model. This is not simply about wanting. It's about desire. The question for brand marketers is how to make that elusive magic happen. In *Desire by Design*, Jean-Pierre Lacroix unravels the irrational element of desire and explains how brands, designers, and marketers can tap into the emotional high that elicits such passion for certain brands. Jean-Pierre shapes high-level ideas and insights from neuroscience, cult fanaticism, and behavioral psychology into practical worksheets that explain the how-to in creating desire for a brand. Using design philosophies he has developed through his thirty years of experience, Jean-Pierre offers interesting history, insights from scientific research, and actionable advice to lead brands from a "want" category to the much-coveted "desire" space in the marketplace.
