Understand the principles behind these documentation practices. Implement best practices specific to each documentation phase and drawing, from title block and cover sheet design to soil plans and plant protection. Organize keynoting systems, cross-referencing and interdisciplinary coordination amongst multiple consultants and vendors. Study sample

Many of the poorest countries in the world are affected by insecurity and violence. Insecurity has human

and economic impacts, both for affected countries and their neighbours. Many insecure countries also receive lower levels of aid per capita than stable countries. These are good reasons to provide assistance to insecure countries, but there are also difficulties and risks. This report examines how the Department for International Development (DFID) works in insecure environments, ranging from some of the world's most insecure countries where armed conflict is still present and stabilisation is required, to less insecure contexts where donors may have more scope to engage in long term development projects. It examines what DFID is achieving and how it designs and manages its programmes, including dealing with risks to its staff. Insecurity is defined by reference to the incidence of political violence and the level of threat to aid workers. The NAO's work included four country

case studies, literature and documentation review, data analysis and surveys. Their findings covered DFID's increasing interest in insecure environments, on what its expenditure has achieved in insecure environments, the design and management of country programmes, managing staff resources and costs and value for money. There are seven recommendations.
