Most of the project management books on the market are basically textbooks. They are dry to begin with, and don't focus on the practical advice that most people need to run their projects. Lessons in Project Management, Second Edition does not assume that you are a project manager building a nuclear reactor or sending a man to the moon. Instead, it focuses on the millions of people who manage normal, medium-to-large projects on an ongoing basis. Each case study in Lessons in Project Management contains an accessible, easy-to-read analysis of the challenges of real-world project management. Each problem is presented, then followed by an examination of the solution, written in easy-to-understand language. The format allows you to more easily relate to the book, since it brings into play a project scenario with practical project management lessons to be learned. You'll also recognize recurring characters who appear in multiple stories, and you'll start to develop some empathy for and interest in their struggles.

Over the past three decades, translation has evolved from a profession practiced largely by individuals to a cottage industry model and finally to a formally recognized industrial sector that is project-based, heavily outsourced and that encompasses a wide range of services in addition to translation. As projects have grown in size, scope and complexity, and as project teams have become increasingly distributed across geographies, time zones, languages and cultures, formalized project management has emerged as both a business requirement and a critical success factor for language service providers. In recognition of these developments, this volume examines the application of project management concepts, tools and techniques to translation and localization projects. The contributors are seasoned practitioners and scholars who offer insights into the central role of project management in the language industry today and discuss best-practice approaches to the adaptation of generic project management knowledge, skills, tools and techniques for translation and localization projects.
