E M 'Matty' Laird was an American success story. Born into to a working class Chicago family, he turned his innate mechanical abilities and fascination with flight into a career that put him at the top of aviation's pioneers. As early as 1915, he was flying a home-made biplane in exhibitions; and in 1919 he set up shop in Wichita, building the Laird Swallow, America's first commercial aircraft. After moving back to Chicago, he designed and manufactured the LC-R Speedwing series of planes. Laird's planes were high-quality machines which were renowned for their speed. In 1930 and 1931, he built the Solution and Super Solution race planes, flown by Charles 'Speed' Holman and Jimmy Doolittle, respectively. Solution won the Thompson Trophy in 1930, and Super Solution won the first Bendix cross-country race in a record-setting time of less than 12 hours. In this profusely illustrated book, Ed Phillips covers Laird's career, the work of the E M Laird Aircraft Company and the record-setting planes that were produced. It is a fascinating look at the early days of commercial aviation and air racing in the United States and it gives Laird and the aircraft he built, the prominence they deserve

Written for the widespread aviation community - students, engineers, scientists, pilots, managers, government personnel, etc., HFA offers a comprehensive overview of the topic, taking readers from the general to the specific, first covering broad issues, then the more specific topics of pilot performance, human factors in aircraft design, and vehicles and systems. The new editors offer essential breath of experience on aviation human factors from multiple perspectives (i.e. scientific research, regulation, funding

agencies, technology, and implementation) as well as knowledge about the science. The contributors are experts in their fields. Topics carried over from the first edition are fully updated, several by new authors who are now at the fore of the field. New material - which represents 50% of the volume - focuses on the challenges facing aviation specialists today. One of the most significant developments in this decade has been NextGen, the Federal Aviation Administration's plan to modernize national airspace and to address the impact of air traffic growth by increasing airspace capacity and efficiency while simultaneously improving safety, environmental impacts and user access. NextGen issues are covered in full. Other new topics include: High Reliability Organizational Perspective, Situation Awareness & Workload in Aviation, Human Error Analysis, Human-System Risk Management, LOSA, NOSS and Unmanned Aircraft System. This book offers the first complete account of more than sixty years of international research on In-Flight Simulation and related development of electronic and electro-optic flight control system technologies (" Fly-by-Wire " and " Fly-by-Light "). They have provided a versatile and experimental procedure that is of particular importance for verification, optimization, and evaluation of flying qualities and flight safety of manned or unmanned aircraft systems. Extensive coverage is given in the book to both fundamental information related to flight testing and state-of-the-art advances in the design and implementation of electronic and electro-optic flight control systems, which have made In-Flight Simulation possible. Written by

experts, the respective chapters clearly show the interdependence between various aeronautical disciplines and in-flight simulation methods. Taken together, they form a truly multidisciplinary book that addresses the needs of not just flight test engineers, but also other aeronautical scientists, engineers and project managers and historians as well. Students with a general interest in aeronautics as well as researchers in countries with growing aeronautical ambitions will also find the book useful. The omission of mathematical equations and in-depth theoretical discussions in favor of fresh discussions on innovative experiments, together with the inclusion of anecdotes and fascinating photos, make this book not only an enjoyable read, but also an important incentive to future research. The book, translated from the German by Ravindra Jategaonkar, is an extended and revised English edition of the book *Fliegende Simulatoren und Technologie in der Luftfahrt*, edited by Peter Hamel and published by Appelhans in 2014.
