"Pharmako poeia: plant powers, poisons, and herbcraft focuses on familiar psychoactive plant-derived substances and related synthetics, ranging from the licit (tobacco, alcohol) to the illicit (cannabis, opium) and the exotic (absinthe, salvia divinorum, nitrous oxide)"--Provided by publisher.

The Craft of Scientific Presentations Prentice Hall
L.A. shoe designer, Maddie Springer, lives her life by three rules: Fashion. Fashion. Fashion. But when she stumbles upon the work of a brutal killer, her life takes an unexpected turn from Manolos to murder. And things only get worse when her boyfriend disappears - along

with \$20 million in embezzled funds - and her every move is suddenly under scrutiny by the LAPD's sexiest cop. With the help of her post-menopausal bridezilla of a mother, a 300 pound psychic and one seriously oversexed best friend, Maddie finds herself stepping out of her stilettos and onto the trail of a murderer. But can she catch a killer before the killer catches up to her.

Pharmako/Poeia University Press of Kansas

Cheesecake, Love & Murder! Life is smooth sailing for Holly Hart until she wakes one morning and spots Theodore lurking outside Just Cheesecake.

Why is her childhood friend-turned-enemy in town?

Supposedly, he wants her business to cater a family party. Suspicious indeed. Especially when he's been spreading lies about Holly's family back in her

hometown. When she sneaks back to her parent's home and finds a body in the living room--almost as if someone was setting her family up for murder--she makes an impulsive decision. She hides the body. Holly has to figure out how to reveal the real killer. If he doesn't get to her first.

The time is ripe, more than fifty years after the publication of the magnum opus by Perls, Hefferline & Goodman, to publish a book on the topic of creativity in Gestalt therapy.

The idea for this book was conceived in March 2001, on the island of Sicily, at the very first European Conference of Gestalt Therapy Writers of the European Association [or Gestalt Therapy. Our starting point was an article on art and creativity in Gestalt therapy, which was presented there by

one of the editors, and illuminated by a vision, held by the other editor, of bringing together colleagues from around the world to contribute to a qualified volume on the subject of creativity within the realm of Gestalt therapy. We wanted to continue the professional discourse internationally and capture the synergetic effects of experienced colleagues' reflections on various aspects of our chosen subject. Moreover, we intended to explore how the theoretical reflection of one's practice can inspire effective interventions and, vice versa, how the discussion of practical experiences can shape new theoretical directions. Hence, our aim in this book is to create a forum on the concept of creativity in Gestalt therapy.

“ An essential, must-read guide ” (Dr. Susan Albers, New York Times bestselling

author of *Eating Mindfully*) from the renowned Duke Integrative Medicine center: the first book to combine health psychology with cutting-edge nutrition research to deliver an up-to-the-minute method for eating mindfully and breaking the yo-yo diet cycle. It's easy on occasion to eat too much, eat too quickly, eat for comfort, or choose junk food. But every year millions of Americans vow to lose weight and get healthy and aren't able to overcome the largest roadblock to these changes—ingrained eating habits. Now two leading experts from Duke Integrative Medicine offer a new

paradigm for eating and health—a step-by-step program that dismantles old patterns, provides new tools for making healthy choices, and fosters deep, internal motivation. Grounded in scientific research, *The Mindful Diet* examines how what we eat and drink affects our body on a biochemical level, and how we can become aware of our own internal signals through the practice of mindfulness. Loaded with concrete meditation exercises, behavioral techniques, nutrition advice, and meal-planning charts, this book provides the tools to manage cravings, curb emotional overeating,

and figure out when you are full. Instead of an all-or-nothing approach to eating, The Mindful Diet focuses on the many variables that drive our habits—including stress, unhappiness, and even unconscious beliefs—and provides a roadmap for sustainable change.

“ This is not an eat this, don ’ t eat that program; rather, it ’ s an attack on the negative thoughts and patterns that lead to diet failure ” (Publishers Weekly).

Lasting weight loss and healthy living begin in the mind: now you can learn how to re-program your body, make healthy choices, lose weight, and keep it off for life.

Are you a witless cretin with no reason to live? Would you like to know more about every piece of knowledge ever? Do you have cash? Then congratulations, because just in time for the death of the print industry as we know it comes the final book ever published, and the only one you will ever need: The Onion's compendium of all things known. Replete with an astonishing assemblage of facts, illustrations, maps, charts, threats, blood, and additional fees to edify even the most simple-minded book-buyer, THE ONION BOOK OF KNOWN KNOWLEDGE is packed with valuable information—such as the life stages of an Aunt; places to kill one's self in Utica, New

York; and the dimensions of a female bucket, or "pail." With hundreds of entries for all 27 letters of the alphabet, THE ONION BOOK OF KNOWN KNOWLEDGE must be purchased immediately to avoid the sting of eternal ignorance.

The Onion Book of Known Knowledge
Springer Science & Business Media

Osgood focuses on major campaigns such as Atoms for Peace, People-to-People, and cultural exchange programs. Drawing on recently declassified documents that record U.S. psychological operations in some three dozen countries, he tells how U.S. propaganda agencies presented everyday life in America to the world: its citizens

living full, happy lives in a classless society where economic bounty was shared by all. Osgood further investigates the ways in which superpower disarmament negotiations were used as propaganda maneuvers in the battle for international public opinion. He also reexamines the early years of the space race, focusing especially on the challenge to American propagandists posed by the Soviet launch of Sputnik. The Complete Book of 2010s Broadway Musicals Springer Science & Business Media
The second in the captivating Hades and Persephone series from fan-favorite bestselling author Scarlett St. Clair. "Are you saying you

wouldn't fight for me?" Hades sighed and brushed his finger along her cheek. "Darling, I would burn this world for you." Persephone's relationship with Hades has gone public and the resulting media storm disrupts her normal life and threatens to expose her as the Goddess of Spring. To add to her troubles, everyone seems eager to warn Persephone away from the God of the Dead by exposing his hellish past. Things only get worse when a horrible tragedy leaves Persephone's heart in ruin and Hades refusing to help. Desperate, she takes matters into her own hands, striking bargains that lead to severe consequences. Faced with a side of Hades she never knew, and crushing

loss, Persephone wonders if she can truly become Hades's queen.

A Spy Like Me Penguin
New edition! Convenient listing of words arranged alphabetically by rhyming sounds. More than 55,000 entries. Includes one-, two-, and three-syllable rhymes. Fully cross-referenced for ease of use. Based on best-selling Merriam-Webster's Collegiate® Dictionary, Eleventh Edition.

Springer

In the great tradition of the American almanac, *The Areas of My Expertise* is a brilliant and hilarious compendium of handy reference tables, fascinating trivia, and sage wisdom on all topics large and small. Although bestsellers such as *Poor Richard's Almanack* and *The Book of Lists* were certainly valuable, they also were largely true.

Here is a different kind of handy desk reference, one in which all of the historical oddities and amazing true facts are sifted through the singular, illuminating imagination of John Hodgman—which is the nice way of saying: He made it all up. John Hodgman brings his considerable expertise to bear in answering all of the questions book buyers have been asking: -What are the mottoes of the 51 United States? THE ANSWER IS PROVIDED -Who were the U.S. presidents who had hooks for hands? THE ANSWER IS PROVIDED -What role does the Yale secret society “Skull and Bones” play in the secret world government? THERE IS NO SECRET WORLD GOVERNMENT -What was the menu at the first Thanksgiving, and did it include eels? Technically, that is two questions, but do not apologize, for John Hodgman shall answer

them both . . . LATER. -Aside from a compendium of fake trivia, what is the best kind of book to write? A SIMPLE TABLE OF THE 55 MOST DRAMATIC LITERARY SITUATIONS PROVIDES THE ANSWER, and John Hodgman is the author of that table. Imagine if The Book of Lists had been rewritten by Peter Cook and Jorge Luis Borges under the pseudonym of “John Hodgman” and then renamed The Areas of My Expertise, and you will only begin to have a sense of the dizzying, uproarious, sublimely weird, and strangely wise journey that is contained within this book (along with all the pages and words). Perfect for anyone who thirsts for knowledge, and especially for collectors of books of fake trivia, The Areas of My Expertise offers through absurdity a better understanding of the world we share—and recognizes

that while the truth may be stranger than fiction, it is never as strange as lies . . . or as true. Look out for John Hodgman's latest book, *Vacationland*, available from Viking in Fall 2017.

How, despite thirty years of effort, Soviet attempts to build a national computer network were undone by socialists who seemed to behave like capitalists. Between 1959 and 1989, Soviet scientists and officials made numerous attempts to network their nation—to construct a nationwide computer network. None of these attempts succeeded, and the enterprise had been abandoned by the time the Soviet Union fell apart. Meanwhile,

ARPANET, the American precursor to the Internet, went online in 1969. Why did the Soviet network, with top-level scientists and patriotic incentives, fail while the American network succeeded? In *How Not to Network a Nation*, Benjamin Peters reverses the usual cold war dualities and argues that the American ARPANET took shape thanks to well-managed state subsidies and collaborative research environments and the Soviet network projects stumbled because of unregulated competition among self-interested institutions, bureaucrats, and others. The capitalists behaved like socialists while the socialists behaved like capitalists. After examining the midcentury rise of

cybernetics, the science of self-governing systems, and the emergence in the Soviet Union of economic cybernetics, Peters complicates this uneasy role reversal while chronicling the various Soviet attempts to build a “unified information network.” Drawing on previously unknown archival and historical materials, he focuses on the final, and most ambitious of these projects, the All-State Automated System of Management (OGAS), and its principal promoter, Viktor M. Glushkov. Peters describes the rise and fall of OGAS—its theoretical and practical reach, its vision of a national economy managed by network, the bureaucratic obstacles it

encountered, and the institutional stalemate that killed it. Finally, he considers the implications of the Soviet experience for today's networked world.

Aaron's special power might just be the coolest- or scariest-thing ever! It's always helped with his bad-boy reputation, his rightfully arrogant all-knowing intimidation seemed to go a long way with his academic and romantic life. That is, until he met Violet, one of the smartest girls in school; a girl he's been using for years, zoning in on her mind to ultimately cheat on tests. Until one day, she failed him.

Her mind wandered all over the place and he couldn't help but sympathize, curiosity got the best of him. Aaron depends so much on his mind-reading capabilities that when they suddenly disappear- so does everything he hasn't worked for. His secret was like Samson and his hair, once it's told, the magic's all gone. Prom Impossible Springer Science & Business Media Significant progress has been made in advanced packaging in recent years. Several new packaging techniques have been developed and new packaging materials have been introduced. This book provides a comprehensive overview of the recent developments in this industry, particularly in the areas of microelectronics,

optoelectronics, digital health, and bio-medical applications. The book discusses established techniques, as well as emerging technologies, in order to provide readers with the most up-to-date developments in advanced packaging.

Materials for Advanced Packaging Sourcebooks Just a few years before the dawn of the digital age, Harvard psychologist Bert Kaplan set out to build the largest database of sociological information ever assembled. It was the mid-1950s, and social scientists were entranced by the human insights promised by Rorschach tests and other innovative scientific protocols. Kaplan, along with

anthropologist A. I. Hallowell and a team of researchers, sought out a varied range of non-European subjects among remote and largely non-literate peoples around the globe. Recording their dreams, stories, and innermost thoughts in a vast database, Kaplan envisioned future researchers accessing the data through the cutting-edge Readex machine. Almost immediately, however, technological developments and the obsolescence of the theoretical framework rendered the project irrelevant, and eventually it was forgotten.

In the 1960's marked changes occurred throughout the world in philosophies and policies related to man's role in life.

These changes, prompted predominantly by extensive increases in knowledge and population density, have produced increased pleasures as well as problems. The rising number of people and improved methods of communication and transportation have caused more relationships among people, with their pleasures, competitions, jealousies, conflicts of

interest, oppressions, and crimes. Large assortments of drugs have been developed and are easily obtained. There are drugs to speed us up, slow us down, make us sleep, change our perspectives on life, promote propagation of life or prevent it, prolong life or terminate it, and modify the course of life in many ways. Also, numerous mechanical devices have been developed that influence the propagation of life, the termination of life, and the manner in which we live. Many people have changed their overall goals in life, and in particular have experienced major

changes in attitudes and policies applying to sexual activity, marriage, birth control, abortion, welfare, children, old people, criminals, economics, social status, careers, education, euthanasia, and suicide. There also has been marked enlightenment concerning the effect of the chemical and physical status of the brain upon normal and abnormal thinking and behavior.

Attaining professional success and finding personal happiness in academic medicine is not an easy path, yet both are critical if the

future is to be brighter through better science, better clinical care, better training, better responsiveness to communities, and better stewardship and leadership in the health professions. This concise, easy to read title consists of “ mini ” chapters intended as a resource to assist early- and middle-career physicians, clinicians, and scientists in understanding the unique mission of academic medicine and building creative, effective, and inspiring careers in academic health organizations. Organized in eight sections, the Guide covers such areas as finding your path in

academic medicine, getting established at an institution, approaching work with colleagues, writing and reviewing manuscripts, conducting empirical research, developing administrative skills, advancing your academic career, and balancing your professional and personal life. Each chapter includes pointers and valuable career and “ best practices ” strategies in relation to the topic area. An exciting addition to the professional development literature, *Achievement and Fulfillment in Academic Medicine: A Comprehensive Guide* is an indispensable

resource for anyone seeking to achieve a fulfilling career in academic medicine. Pierre Fauconnier and His Descendants Springer
Since 1995, more than 150,000 students and researchers have turned to *The Craft of Research* for clear and helpful guidance on how to conduct research and report it effectively. Now, master teachers Wayne C. Booth, Gregory G. Colomb, and Joseph M. Williams present a completely revised and updated version of their classic handbook. Like its predecessor, this new edition reflects the way researchers actually work: in a

complex circuit of thinking, writing, revising, and rethinking. It shows how each part of this process influences the others and how a successful research report is an orchestrated conversation between a researcher and a reader. Along with many other topics, *The Craft of Research* explains how to build an argument that motivates readers to accept a claim; how to anticipate the reservations of thoughtful yet critical readers and to respond to them appropriately; and how to create introductions and conclusions that answer that most demanding

question, "So what?" Celebrated by reviewers for its logic and clarity, this popular book retains its five-part structure. Part 1 provides an orientation to the research process and begins the discussion of what motivates researchers and their readers. Part 2 focuses on finding a topic, planning the project, and locating appropriate sources. This section is brought up to date with new information on the role of the Internet in research, including how to find and evaluate sources, avoid their misuse, and test their reliability. Part 3 explains the art of making an argument and supporting it. The

authors have extensively revised this section to present the structure of an argument in clearer and more accessible terms than in the first edition. New distinctions are made among reasons, evidence, and reports of evidence. The concepts of qualifications and rebuttals are recast as acknowledgment and response. Part 4 covers drafting and revising, and offers new information on the visual representation of data. Part 5 concludes the book with an updated discussion of the ethics of research, as well as an expanded bibliography that includes many electronic sources. The

new edition retains the accessibility, insights, and directness that have made *The Craft of Research* an indispensable guide for anyone doing research, from students in high school through advanced graduate study to businesspeople and government employees. The authors demonstrate convincingly that researching and reporting skills can be learned and used by all who undertake research projects. New to this edition: Extensive coverage of how to do research on the internet, including how to evaluate and test the reliability of sources New

information on the visual representation of data Expanded bibliography with many electronic sources Big Mind F.A. Davis In fifth grade, my teacher set us up with pen pals from a different school. Thinking I was a girl, with a name like Misha, the other teacher paired me up with her student, Ryen. My teacher, believing Ryen was a boy like me, agreed. It didn't take long for us to figure out the mistake. And in no time at all, we were arguing about everything Getting Things Done MIT Press This new edition of an acclaimed text reviews the evidence for best practice in Maternal-Fetal Medicine, to present the reader with

the right information, with appropriate use of proven interventions and avoidance of ineffectual or harmful ones. The information is presented in the right format by summarizing evidence succinctly and clearly in tables and algorithms. The aim is to inform the clinician, to reduce errors and "to make it easy to do it right." The volume can be purchased separately or together with the companion volume on Obstetric Evidence Based Guidelines (set ISBN 9780367567033). The Series in Maternal-Fetal Medicine is published in conjunction with the Journal of Maternal-Fetal and Neonatal Medicine.

From reviews of previous editions: An excellent resource with quick and easy protocols... this book has a permanent spot on my shelf. —Doody 's Review Service
Dr. Strange Beard
Gemma Halliday
Publishing
The Brave New World of Sex We've seen in less than a generation a swift revolution in human sexual behavior, attitude, and consequences so dramatic that some people are left in a state of stunned dismay and the public at large in aimless confusion. Much of the trend, if you can call a revolution a trend, is fueled by, or at least made possible by,

technological innovations dating back to the middle of the twentieth century. The birth control pill opened the gate to promiscuity with little fear of pregnancy; marriage became an annoyance; divorce became an opportunity; two working parents became a necessity; and teenage sex became nearly as socially acceptable as holding hands or going to the movies. The population explosion resulted in a spiraling epidemic of children giving birth to children, many of them on welfare. Girls seeking relief through abortions were sometimes forced to have their unwanted offspring despite the

inevitability of some of them living in poverty and a desperate dead-end environment of squalor and crime. Some misguidedly wanted babies and ended up the same way. To top it all, discipline 2 A Sexual Odyssey became a lost art, leaving schools and neighborhoods infested with gun-toting, knife-wielding teenage delinquents-even in middle-class areas-who engaged in contests to see who could get the most girls knocked up. The chaotic state of fornication, mating, and birthing may be a throwback to the past.
