The expert contributors from around the globe provide unique case studies to guide indigenous communities and their partners in protecting their intellectual property. Addressing the poor fit between western regimes of intellectual property rights and the requirements for safeguarding indigenous cultural resources, the authors describe positive efforts at protecting indigenous knowledge. It is an important resource for advocates for indigenous and human rights and legal scholars.

This volume provides a comprehensive review of the developments which have taken place during the last thirty years concerning the asymptotic properties of solutions of nonautonomous ordinary differential equations. The conditions of oscillation of solutions are established, and some general theorems on the classification of equations according to their oscillatory properties are proved. In addition, the conditions are found under which nonlinear equations do not have singular, proper, oscillatory and monotone solutions. The book has five chapters: Chapter I deals with linear differential equations; Chapter II with quasilinear equations; Chapter III with general nonlinear differential equations; and Chapter IV and V deal, respectively, with higher-order and second-order differential equations of the Emden-Fowler type. Each section contains problems, including some which presently remain unsolved. The volume concludes with an extensive list of references. For researchers and graduate students interested in the qualitative theory of differential equations.

This title examines the structure of approximate solutions of optimal control problems considered on subintervals of a real line. Specifically at the properties of approximate solutions which are independent of the length of the interval. The results illustrated in this book look into the so-called turnpike property of optimal control problems. The author generalizes the results of the turnpike property by considering a class of optimal control problems which is identified with the corresponding complete metric space of objective functions. This establishes the turnpike property for any element in a set that is in a countable intersection which is open everywhere dense sets in the space of integrands; meaning that the turnpike property holds for most optimal control problems. Mathematicians working in optimal control and the calculus of variations and graduate students will find this book useful and valuable due to its presentation of solutions to a number of difficult problems in optimal control and presentation of new approaches, techniques and methods.

The Art of Wholesaling Properties: How to Buy and Sell Real Estate without Cash or Credit distills the experiences of two of the nation's largest real estate wholesalers who, all told, have flipped over one thousand homes. Aram Shah and Alex Virelles present a step-by-step guide that explains how others may replicate their proven methods in their own wholesaling ventures. Reading this book will give investors the A-to-Z insights they need for cashing in on the fastest and most profitable ways to flip paper in the real estate market. Moving along a strategic step at a time, The Art of Wholesaling Properties explains how to • make offers that actually get accepted; • find hidden, motivated sellers; • use a real estate agent to find gold mines through the MLS; • build a strong list of cash buyers; • negotiate with sellers using proven and tested scripts; • assign or double close on properties; • master the A-B, B-C transaction; • deploy a team and put the business on autopilot; and • achieve financial freedom without using cash or credit! If you find the prospects of making money exciting, if you get the feeling there is wealth hidden in the real estate market in your community, and if you desire to learn demonstrably successful techniques to apply in your own ventures, then The Art of Wholesaling Properties: How to Buy and Sell Real Estate without Cash or Credit will give you the guidance and education you need to begin wholesaling homes and generating profits without using your own cash or credit.

The salient features of the present edition are: All the Problems and Solutions have been thoroughly revised in the light of up-to-date amendments in Income tax Law and Rules for Assessment Year 2020-21. Almost all numerical questions given at the end of the chapters of the authors' other publications on Income-tax (viz., Income-tax Law and Accounts, Aaykar Vidhan evam Lekhe, Law and Practice of Income-tax) have been solved in this book and the number printed within brackets at the end of the questions in other publications is the problem number of this book. The selection and sequence of the questions are well planned and systematic so as to cover all ticklish points within a reasonable number of questions. Wherever needed, detailed explanatory notes have been given at the end of solutions. Candidates preparing for C.A., Company Secretaries, Cost and Works Accountants, and Income-tax Departmental Examinations, will, particularly, find the book very useful. It will also be useful for candidates preparing for B.Com. and M.Com. Examinations of various Indian Universities.

The Application of Constant Property Solutions to Heat, Mass and Momentum Transfer Calculations Rowman Altamira Practical Finance for Property Investment provides readers with an introduction to the most fundamental concepts, principles, analytical

methods, and tools useful for making investing and financing decisions regarding income-producing property. The book begins by considering how to value income-producing property by forecasting a property's cash flows and estimating appropriate discount rates. It then discusses how both debt and private equity are used as methods to finance a property's acquisition. The book provides a thorough discussion of the taxation of property income as well as how investors can quantify the risks to investing in property. The book concludes with important considerations for investors when their investment thesis does not come to fruition. Practical Finance for Property Investment offers a unique and novel pedagogy by pairing each book chapter with an in-depth real-world case study, which forces readers to confront the occasional tensions between finance theory and property investment practice. The book is designed for investors and students interested in learning what finance theory implies about property investment. Readers and Instructors can access electronic resources, including the spreadsheets used in the textbook, at the book's website: www.routledge.com/9780367333041. Intellectual property rights and their overlaps are considered in light of rights purposes, relying on the concept of a balance of rights as the measuring rod for assessment of the consequences resulting from the exercise of overlapping rights. Identifying the complex interface between different types of intellectual property rights, this book discusses the use of these rights and their effect on a diverse group of stakeholders, from individual users of e-books to large corporations operating search engines on the internet. The book suggests solutions to potentially objectionable uses of overlapping rights in an attempt to provide judiciary and law practitioners with an analytical framework for resolving disputes of overlaps in the intellectual property system. In doing so, the author investigates how use of intellectual property rights associated with one segment of the system can affect the carefully crafted balance of rights held by various stakeholders in an overlapping segment. In particular, the book suggests that a properly construed doctrine of misuse of intellectual property rights would provide an adequate response to the challenge posed by improper use of overlapping intellectual property rights. This book is of particular interest to law practitioners, managers in advanced technology and media industries, academics, and university students who work with or analyze intellectual property and new technologies.

Macromolecular Solutions: Solvent-Property Relationships in Polymers is a collection of papers presented at a symposium on Macromolecular Solutions, held New York City on August 23-28, 1981, sponsored by the American Chemical Society at its 182nd national meeting. This book is composed of 19 chapters and begins with discussions on the concept, application, and analysis of solubility parameters of polymers. The succeeding chapters deal with the role of solubility parameters in polymer coating design and stress cracking of nylon. Considerable chapters are devoted to the preparation, properties, reactions, and analysis of various polymers and copolymers. These topics are followed by surveys of the polymer-surfactant interaction effect on polymer solution properties and the effects of methanol-gasoline mixtures on elastomers. The final chapters describe the residual solvent content effect on dissolution kinetics of polymers; the application of excimer fluorescence to measure polymer-solvent interactions; and a general procedure for the calculation of thermodynamic properties of polymer solutions. This book will be of great value to polymer chemists, manufacturers, and researchers.
