This book examines recent developments in river (flood) management from the viewpoint of Making Space for the River and the resulting challenges for water governance. Different examples from Europe and the United States of America are discussed that aim to 'green' rivers, including increasing river discharge for flood management, enhancing natural and landscape values, promoting local or regional economic development, and urban regeneration. Making Space for the River presents not only opportunities and synergies but also risks as it crosses established institutional boundaries and touches on multiple stakeholder interests, which can easily clash. Making Space for the River helps the reader to understand the policy and governance dynamics that lead to these tensions and pays attention to a variety of attempts to organize effective and legitimate governance approaches. The book helps to realize connections between policy domains, problem frames, and goals of different actors at different levels that contribute to decisive and legitimate action. Making Space for the River has an international comparative character that sheds light upon both the country-specific governance dilemmas which relate to specific state traditions and institutional characteristics of national water management, but also uncovers interesting similarities which provide us with building blocks to formulate more generic lessons about the governance of Making Space for the River in different institutional and social contexts. The authors of this book come from a variety of disciplines including public administration, town and country planning, geography and anthropology, and these different disciplines bring multiple ways of knowing and understanding of Making Space for the River programs. The book combines interdisciplinary scientific analyses of Space for the River projects and programs with practical knowing and lessons-drawing. Making Space for the River is written for both practitioners and scholars and students of environmental policy, spatial planning, land use and water management. Editors: Jeroen Warner, Assistant Professor of Disaster Studies, Wageningen University, The Netherlands. Arwin van Buuren, Associate Professor of Public Administration, Erasmus University Rotterdam, The Netherlands. The design and functioning of an information system improve to the extent that the system can handle the questions people ask. Surprisingly, however, researchers in the cognitive, computer, and information sciences have not thoroughly examined the multitude of relationships between information systems and questions -- both question asking and answering. The purpose of this book is to explicitly examine these relationships. Chapter contributors believe that questions play a central role in the analysis, design, and use of different kinds of natural or artificial information systems such as human cognition, social interaction, communication networks, and intelligent tutoring systems. Their efforts show that data structures and representations need to be organized around the questioning mechanisms in order to achieve a quick retrieval of relevant useful information.

This paper surveys early intellectual antecedents of the Krueger (2001) proposal for creating bankruptcy reorganization procedures at the international level. We focus on actual proposals for new procedures made from the late 1970s up to an influential lecture by Sachs (1995), with brief reference to the formal economics literature on sovereign debt. Beginning with a paper by Oechsli (1981), several key contributions are made during this period, including the analogy with domestic bankruptcy procedures, an understanding of the inefficiencies in international lending that might justify such procedures, and specific institutional and legal suggestions that continue to play a role in the current debate.

This book summarizes years of research in the field of fuzzy relational programming, with a special emphasis on geometric models. It discusses the state-of-the-art in fuzzy relational geometric problems, together with key open issues that must be resolved to achieve a more efficient application of this method. Though chiefly based on research conducted by the authors, who were the first to introduce fuzzy geometric problems, it also covers important findings obtained in the field of linear and non-linear programming. Thanks to its balance of basic and advanced concepts, and its wealth of practical examples, the book offers a valuable guide for both newcomers and experienced researcher in the fields of soft computing and mathematical optimization.

#### **Creating Healthy Workplaces** Apress

Creating Healthy Workplaces includes interventions that relate the efforts undertaken by researchers and organizations to reduce stress and improve the mental and physical health of employees through positive change initiatives. Those working in the field of occupational stress have received criticism that too much emphasis has been placed on negative issues and that positive initiatives have been largely ignored. This book delves into both the positive and the stress fields and compares the types of interventions each entail. Some of the interventions described target individuals and their attitudes and behaviours, others target workplace relationships, work units and the wider organization. Outcomes such as reduced occurrences of smoking, obesity, depression, elevated blood pressure, accidents and workplace injuries, absence and staff turnover are reported. The factors associated with the success of these interventions are identified and advice is given as to how you might proceed to develop worksite interventions of your own.

An investigation of the syntax and semantics of wh-questions through the lens of intervention effects, offering a new proposal on overt and covert wh-movement. In this book, Hadas Kotek investigates the syntax and semantics of wh-questions, offering a new solution to a central question in the study of interrogatives: given that overt wh-movement is cross-linguistically common, is syntactic movement a prerequisite for the interpretation of wh-phrases? Some linguists argue that all wh-phrases undergo movement to interrogative C, even if covertly; others propose mechanisms of in-situ interpretation that do not require any movement. Kotek moves beyond these positions to argue that wh-in-situ does move covertly, but not necessarily to C. Instead, she contends, wh-in-situ undergoes a short movement step akin to covert scrambling. This makes the LF behavior of English parallel to the overt behavior of German. Kotek presents a series of self-paced reading experiments, alongside judgment data from German, to substantiate the idea of covert scrambling. She introduces new diagnostics for the underlying structure of questions, using as a principal tool the distribution of intervention effects. This system allows her to offer the first unified account for a range of phenomena of interrogative syntax-semantics as pied-piping, superiority effects, the cross-linguistically varied syntax of questions, and intervention effects. Kotek develops a theory of interrogative syntax-semantics; studies the phenomena of intervention effects in wh-questions, proposing that the nature of intervention is crucially tied to the availability of wh-movement in a question; and shows that covert wh-movement should be modeled as a short scrambling operation rather than an unbounded, successive-cyclic, and potentially long-distance movement operation.

#### *Ethical and Social Issues in Professional Education* Nordic Council of Ministers

Removing barriers to mobility and encouraging cross-border freedom of movement have long been priorities for the Nordic countries. A series of analyses and reports have addressed the issue. In Punkaharju in 2007, the Nordic prime ministers decided that it was time for this work to enter into a more operational phase and they set up the Freedom of Movement Forum. In addition to safeguarding citizens' rights, work on this issue makes the Nordic countries more competitive and promotes economic growth.

\* The emphasis of this book will be on detailed practicality. Most of the SAN books provide a theoretical treatment of the technology from a top-down perspective. This book will be written from the perspective of "from the ground up". \* Relates specific technology offerings to particular application areas. Email stores, Image stores, Video Production and RDBMS disk are used as specific case studies to show how the hardware, firmware, and interconnects are set up and used. \* SAN technology is ready to move out of the glass house and large scale storage is becoming applicable to even dedicated purposes. This represents an increase in the potential audience for a book on SANs and, of course, remains highly useful for the administrators and centralized technical staff responsible for backups, recoverability, and availability.

This book reflects and extends the great debates that schools, colleges, and universities are having in response to the profound moral conflicts and personal questions facing professionals today: What should we teach our students? What values should we communicate and nurture? What should be the role of the traditional liberal arts in professional education? How should schools and colleges respond to the demands of women and minorities for a more inclusive curriculum? The authors explore ongoing theoretical and practical considerations of graduate professional education through the ethical and social issues facing professionals in public service. Administrators, teachers, counselors, nurses, or lawyers are recognizing that they face similar questions about their personal and professional lives: Is it possible to sustain a set of fully human values as a practicing professional? As a member of a public organization, how does one deal with dilemmas involving conflicting priorities and ambiguous goals? The authors responses to these questions are presented as themes, describing connections between curriculum and pedagogy. They have designed an approach to ethical and social questions respectful of the contributions of adult learners and the need to provide diverse perspectives.
