Questions in pure mathematics proposed at the B.A. and B.Sc. pass and honours examinations of the University of London with complete solutions by J.E.A. Steggall Newnes

This paper surveys early intellectual antecedents of the Krueger (2001) proposal for creating bankruptcy reorganization procedures at the international level. We focus on actual proposals for new procedures made from the late 1970s up to an influential lecture by Sachs (1995), with brief reference to the formal economics literature on sovereign debt. Beginning with a paper by Oechsli (1981), several key contributions are made during this period, including the analogy with domestic bankruptcy procedures, an understanding of the inefficiencies in international lending that might justify such procedures, and specific institutional and legal suggestions that continue to play a role in the current debate.

The Complete Problem Solver SAGE Publications

This book reflects and extends the great debates that schools, colleges, and universities are having in response to the profound moral conflicts and personal questions facing professionals today: What should we teach our students? What values should we communicate and nurture? What should be the role of the traditional liberal arts in professional education? How should schools and colleges respond to the demands of women and minorities for a more inclusive curriculum? The authors explore ongoing theoretical and practical considerations of graduate professional education through the ethical and social issues facing professionals in public service. Administrators, teachers, counselors, nurses, or lawyers are recognizing that they face similar questions about their personal and professional lives: Is it possible to sustain a set of fully human values as a practicing professional? As a member of a public organization, how does one deal with dilemmas involving conflicting priorities and ambiguous goals? The authors responses to these questions are presented as themes, describing connections between curriculum and pedagogy. They have designed an approach to ethical and social questions respectful of the contributions of adult learners and the need to provide diverse perspectives.

Technology is continuously advancing and changing the way aspects of business are performed. The implementation of mobile business transactions to acquire various types of goods has changed the landscape of consumerism. Apps Management and E-Commerce Transactions in Real-Time is a timely research publication that features the latest scholarly trends, issues, and implications of the use of a new technological forum in electronic buying and selling.

Including extensive coverage on a number of topics and perspectives such as social networks, customer satisfaction, and cloud computing,

this book is ideally designed for researchers, academicians, and students seeking current research on mobile solutions in business deals.

Security Issues in Fog Computing from 5G to 6G Springer Nature

This book gives a comprehensive overview of the most advanced theories, methodologies and applications in computer vision. Particularly, it gives an extensive coverage of 3D and robotic vision problems. Example chapters featured are Fourier methods for 3D surface modeling and analysis, use of constraints for calibration-free 3D Euclidean reconstruction, novel photogeometric methods for capturing static and dynamic objects, performance evaluation of robot localization methods in outdoor terrains, integrating 3D vision with force/tactile sensors, tracking via in-floor sensing, self-calibration of camera networks, etc. Some unique applications of computer vision in marine fishery, biomedical issues, driver assistance, are also highlighted. This book summarizes years of research in the field of fuzzy relational programming, with a special emphasis on geometric models. It discusses the state-of-the-art in fuzzy relational geometric problems, together with key open issues that must be resolved to achieve a more efficient application of this method. Though chiefly based on research conducted by the authors, who were the first to introduce fuzzy geometric problems, it also covers important findings obtained in the field of linear and non-linear programming. Thanks to its balance of basic and advanced concepts, and its wealth of practical examples, the book offers a valuable guide for both newcomers and experienced researcher in the fields of soft computing and mathematical optimization.

Advances in our understanding of the brain and rapid advances in the medical practice of neurology are creating questions and concerns from an ethical and legal perspective. Ethical and Legal Issues in Neurology provides a detailed review of various general aspects of neuroethics, and contains chapters dealing with a vast array of specific issues such as the role of religion, the ethics of invasive neuroscience research, and the impact of potential misconduct in neurologic practice. The book focuses particular attention on problems related to palliative care, euthanasia, dementia, and neurogenetic disorders, and concludes with examinations of consciousness, personal identity, and the definition of death. This volume focuses on practices not only in North America but also in Europe and the developing world. It is a useful resource for all neuroscience and neurology professionals, researchers, students, scholars, practicing clinical neurologists, mental health professionals, and psychiatrists. A comprehensive introduction and reference on neuroethics Includes coverage of how best

to understand the ethics and legal aspects of dementia, palliative care, euthanasia and neurogenetic disorders Brings clarity to issues regarding ethics and legal responsibilities in the age of rapidly evolving brain science and related clinical practice

Turbulence is not new to the business world. In fact, the turbulence is increasing and managers are seeing teams spinning their wheels. But now there is a book that addresses these realities-Problem Solving for Results. Management systems are in a state of crisis and operations are more complex. The old top-down operations mode no longer suffices. Today's businesses demand speed and increased accuracy, forcing everyone to re-evaluate chains of command and tear down the walls between functions. Amid the responsibilities of traditional management lies problem solving. The push is toward moving decision-making authority down the ladder to all levels. Managers are no longer equipped to or capable of making the number and variety of necessary decisions in a vacuum. The current mode is to have employees deal directly with workplace issues and take corrective action without complaint and without management involvement. Coping with this reality and preparation for these improvements in workplace problem solving requires interest and motivation. Problem Solving for Results can facilitate this by demystifying and simplifying the process. This book bridges philosophy and theory and puts together a practical integration of all the tools necessary to get results from your investment of time, energy, and money.

Removing barriers to mobility and encouraging cross-border freedom of movement have long been priorities for the Nordic countries. A series of analyses and reports have addressed the issue. In Punkaharju in 2007, the Nordic prime ministers decided that it was time for this work to enter into a more operational phase and they set up the Freedom of Movement Forum. In addition to safeguarding citizens' rights, work on this issue makes the Nordic countries more competitive and promotes economic growth.

Using a problem-solving approach, this book emphasizes the connection between writing and learning - learning to solve problems in and through technical communication. The text stresses the importance of the environment, which consists of such elements as the purpose of the document, the audience at which it is directed, the organizational culture in which it is produced and time constraints. Practical, real-world cases set the framework for each chapter, involving students in the processes of communication and problem analysis/solution. Contemporary technology communication theory is highlighted throughout and in addition, the book's emphasis on value and ethics should give students a balanced view of the connection between technology and humanities.

* The emphasis of this book will be on detailed practicality. Most of the SAN books provide a theoretical treatment of the technology from a top-down perspective. This book will be written from the perspective of "from the ground up". * Relates specific technology offerings to particular application areas. Email stores, Image stores,

Video Production and RDBMS disk are used as specific case studies to show how the hardware, firmware, and interconnects are set up and used. * SAN technology is ready to move out of the glass house and large scale storage is becoming applicable to even dedicated purposes. This represents an increase in the potential audience for a book on SANs and, of course, remains highly useful for the administrators and centralized technical staff responsible for backups, recoverability, and availability.

The book provides an examination of how fog security is changing the information technology industry and will continue to in the next decade. The authors first discuss how fog enables key applications in wireless 5G, the Internet of Things, and big data. The book then presents an overview of fog/edge computing, focusing on its relationship with cloud technology, Internet of Things and the future with the use of secure 5G/6G communication. The book also presents a comprehensive overview of liabilities in fog/edge computing within multi-level architectures and the intelligent management. The last part of the book reviews applications of fog/edge computing in smart cities, including in Industrial IoT, edge-based augmented reality, data streaming, and blockchain-based.

This book consists of eight chapters, five of which provide a summary of the tutorials and workshops organised as part of the cHiPSet Summer School: High-Performance Modelling and Simulation for Big Data Applications Cost Action on "New Trends in Modelling and Simulation in HPC Systems," which was held in Bucharest (Romania) on September 21 – 23, 2016. As such it offers a solid foundation for the development of new-generation data-intensive intelligent systems. Modelling and simulation (MS) in the big data era is widely considered the essential tool in science and engineering to substantiate the prediction and analysis of complex systems and natural phenomena. MS offers suitable abstractions to manage the complexity of analysing big data in various scientific and engineering domains. Unfortunately, big data problems are not always easily amenable to efficient MS over HPC (high performance computing). Further, MS communities may lack the detailed expertise required to exploit the full potential of HPC solutions, and HPC architects may not be fully aware of specific MS requirements. The main goal of the Summer School was to improve the participants' practical skills and knowledge of the novel HPC-driven models and technologies for big data applications. The trainers, who are also the authors of this book, explained how to design, construct, and utilise the complex MS tools that capture many of the HPC modelling needs, from scalability to fault tolerance and beyond. In the final three chapters, the book presents the first outcomes of the school: new ideas and novel results of the research on security aspects in clouds, first prototypes of the complex virtual models of data in big data streams and a data-intensive computing framework for opportunistic networks. It is a valuable reference resource for those wanting to start working in HPC and big data systems, as well as for advanced researchers and practitioners.

Amazon, 11 reviews for 5-star average: "Excellent, very helpful, to the point, concise without leaving out important details." "Really helps and is easy to understand." This practical, concise, and accessible guide for graduate students and advanced clinicians delivers step-by-step guidelines for integrating research and best evidence to produce concise, well-written project proposals. Health care professionals in advanced practice are increasingly being asked to be able to deliver clinical project proposals using best evidence for advancing quality patient care. With the same "must know" clinical scholarship tools of the first edition, this revision provides practical guidelines of common project models for developing and writing a tight proposal from start to finish while leaving room for the unique nature of most clinical project topics. The second edition includes a completely new chapter on quality improvement concepts, new project proposal abstracts, and new information specific to the DNP project from the AACN. Using the same three-part organization to walk through the intricacies of planning, writing, and completing scholarly project proposals, this new edition also adds new key features to keep readers engaged with the text and their own ongoing or forthcoming proposal. Chapters have been updated to include websites for additional learning, as well as advice from DNP students who have themselves successfully completed project proposals. Reflective questions, tips for completing proposals, exemplars, and reader activities throughout the book facilitate readers' greater understanding of projects and subsequent proposals. New to the Second Edition: A new chapter on quality improvement concepts Advice from DNP students who have themselves completed proposals Chapter updates and edits for enhanced clarity Websites for additional learning New information specific to the DNP project based on guidance from the AACN Increased emphasis on the Project Triangle, an

important foundational structure Key Features: Provides topflight guidance in proposal writing for DNP and other nursing clinical projects Details parameters for integrating scholarship with clearly communicated professional objectives Contains numerous writing prompts and questions that guide students in reflective scholarly writing Offers examples of good writing, reflective questions, and tools for self-assessment Offers helpful tips for making proposals concise yet complete

Strategies and Solutions to Advanced Organic Reaction Mechanisms: A New Perspective on McKillop's Problems builds upon Alexander (Sandy) McKillop's popular text, Solutions to McKillop's Advanced Problems in Organic Reaction Mechanisms, providing a unified methodological approach to dealing with problems of organic reaction mechanism. This unique book outlines the logic, experimental insight and problem-solving strategy approaches available when dealing with problems of organic reaction mechanism. These valuable methods emphasize a structured and widely applicable approach relevant for both students and experts in the field. By using the methods described, advanced students and researchers alike will be able to tackle problems in organic reaction mechanism, from the simple and straight forward to the advanced. Provides strategic methods for solving advanced mechanistic problems and applies those techniques to the 300 original problems in the first publication Replaces reliance on memorization with the understanding brought by pattern recognition to new problems Supplements worked examples with synthesis strategy, green metrics analysis and novel research, where available, to help advanced students and researchers in choosing their next research project

Learn how to evaluate, verify, and analyze information in order to compose an evidence-based proposition; target the audiences you intend to inform or influence; eliminate counter arguments and resistance before the fact; and deliver an effectively researched and persuasively presented proposal. Proposal Savvy defines, clarifies, and demystifies each phase of proposal development. No more guesswork. You will learn how to employ the time-honored process of problem solving and the critical/creative-thinking skill that drives it, how this reasoning system applies to not just a few but a variety of proposal opportunities, and how to anticipate and overcome barriers to a "yes" decision from executive or client.

Computer and Information Security Handbook Apress

The design and functioning of an information system improve to the extent that the system can handle the questions people ask. Surprisingly, however, researchers in the cognitive, computer, and information sciences have not thoroughly examined the multitude of relationships between information systems and questions -- both question asking and answering. The purpose of this book is to explicitly examine these relationships. Chapter contributors believe that questions play a central role in the analysis, design, and use of different kinds of natural or artificial information systems such as human cognition, social interaction, communication networks, and intelligent tutoring systems. Their efforts show that data structures and representations need to be organized around

the questioning mechanisms in order to achieve a quick retrieval of relevant useful information.

How to Write and Present Technical Information World Scientific

The objective of the 2014 International Conference on Computer, Network Security and Communication Engineering (CNSCE2014) is to provide a platform for all researchers in the field of Computer, Network Security and Communication Engineering to share the most advanced knowledge from both academic and industrial world, to communicate with each other about their experience and most up-to-date research achievements, and to discuss issues and future prospects in these fields. As an international conference mixed with academia and industry, CNSCE2014 provides attendees not only the free exchange of ideas and challenges faced by these two key stakeholders and encourage future collaboration between members of these groups but also a good opportunity to make friends with scholars around the world. As the first session of the international conference on CNSCE, it covers topics related to Computer, Network Security and Communication Engineering. CNSCE2014 has attracted many scholars, researchers and practitioners in these fields from various countries. They take this chance to get together, sharing their latest research achievements with each other. It has also achieved great success by its unique characteristics and strong academic atmosphere as well as its authority.
