Psychological Testing in the Service of Disability Determination John Wiley & Sons

The United States Social Security Administration (SSA) administers two disability programs: Social Security Disability Insurance (SSDI), for disabled individuals, and their dependent family members, who have worked and contributed to the Social Security trust funds, and Supplemental Security Income (SSI), which is a means-tested program based on income and financial assets for adults aged 65 years or older and disabled adults and children. Both programs require that claimants have a disability and meet specific medical criteria in order to qualify for benefits. SSA establishes the presence of a medically-determined impairment in individuals with mental disorders other than intellectual disability through the use of standard diagnostic criteria, which include symptoms and signs. These impairments are established largely on reports of signs and symptoms of impairment and functional limitation. Psychological Testing in the Service of Disability Determination considers the use of psychological tests in evaluating disability claims submitted to the SSA. This report critically reviews selected psychological tests, including symptom validity tests, that could contribute to SSA disability determinations. The report discusses the possible uses of such tests and their contribution to disability determinations. Psychological Testing in the Service of Disability Determination discusses testing norms, qualifications for administration of tests, administration of tests, and reporting results. The recommendations of this report will help SSA improve the consistency and accuracy of disability determination in certain cases.

This report presents the primary papers given at a 1992 workshop to identify specific higher order thinking and communication skills and to develop appropriate indicators of collegiate outcomes as suggested by Goal 5.5 of the National Education Goals formulated in 1990. This goal addressed improvement in college graduates' ability to "think critically, communicate effectively, and solve problems." Part 1 presents the five papers upon which the working groups built their discussions. These papers are: (1) "Skills for Citizenship" (Suzanne W. Morse); (2) "A National Assessment of Critical Thinking Skills in Adults:

Taking Steps Toward the Goal" (Diane F. Halpern); (3) "Assessing Thinking: A Framework for Measuring Critical Thinking and Problem Solving Skills at the College Level" (David Perkins et al.); (4) "Assessing Speaking and Listening: Preliminary Considerations for a National Assessment" (John A. Daly); and (5) "No Guru, No Method, No Teacher: The Communication Domain and the NACSL (National Assessment of College Student Learning)" by Stephen P. Witte. Part 2 includes group summary reports, reviewers' comments, a listing of speaking and listening skills, and additional information on an ongoing Delphi study at Pennsylvania State University. Part 3 presents comments by participants on the conference products and results of a survey of all participants. Consensus on "next steps" included recommending further development of the taxonomy of skills, abilities, and competencies. (The five papers contain references.) (DB)

"Includes 8 real tests and official answer explanations"--Cover. Third Report of Session 2007-08, Vol. 2: Oral and Written Evidence AIHA

There have been many important changes in the participation of women and men in American society over the past quarter-century. Tests play a role in those changes by providing evidence of the diverse achievement and proficiency of women and men. They aid the learning process and reflect inequalities in opportunity to learn and participate. In addition, they provide useful information in considering what alternatives in education and work make most sense for individuals and influence views about groups of students, educational programs, and a wide range of issues. For all of these reasons, it is important that tests assess fairly and reflect accurately the ways young people are and are not achieving as well as desired. The test performance of women and men is a research topic of historical interest and has received much attention in recent years. Because of this increased interest, there is a great deal of new research and data available. The purpose of the study presented in this volume was to review this new

information with two objectives in mind: *to clarify patterns of gender difference and similarity in test performance and related achievements, and *to see what implications those findings might have for fair assessment and, as a corollary, examine the assessment process as a possible source of gender differences. This study is interested in tests used in education to assess developed knowledge and skill. In order to gain a broader view of gender similarity and difference, the contributors looked at other types of measures and other characteristics of young women and men. Their hope is to contribute to a firmer basis for insuring fairness in tests--an objective which is particularly important as the field moves increasingly to new forms of assessment in which there is less experience.

In psychiatry, as in many other medical disciplines, training is shifting from an emphasis on testing factual knowledge towards a system based on continuing assessment and the acquisition of practical skills and competencies. Workplace Based Assessments in Psychiatric Training describes current approaches to these new assessment systems around the world, provides practical advice regarding their implementation and makes recommendations for future developments. The book opens with an overview and analysis of methods

of workplace based assessments, followed by a review of the trainee assessment from the patient perspective. Chapters contain in-depth, detailed discussion of recent developments in Canada, Denmark, India, the UK and the USA. The book reviews both technical developments in assessment tools and techniques and the socio-political context within which these have taken place. With a practical focus and unique global perspective, this is a 'must buy' for anyone responsible for the supervision of psychiatric trainees.

In the music classroom, instructors who hope to receive aid are required to provide data on their classroom programs. Due to the lack of reliable, valid large-scale assessments of student achievement in music, however, music educators in schools that accept funds face a considerable challenge in finding a way to measure student learning in their classrooms. From Australia to Taiwan to the Netherlands, music teachers experience similar struggles in the quest for a definitive assessment resource that can be used by both music educators and researchers. In this two-volume Handbook, contributors from across the globe come together to provide an authority on the assessment, measurement, and evaluation of student learning in music. The Handbook's first volume emphasizes international and theoretical perspectives on music education assessment in the major world regions. This volume also looks at technical aspects of measurement in music, and outlines situations where theoretical foundations can be applied to the development of tests in music. The Handbook's second volume offers a series of practical and US-focused approaches to music education assessment. Chapters address assessment in different types of US classrooms; how to assess specific skills or requirements; and how assessment can be used in tertiary and music teacher education classrooms.

Together, both volumes of The Oxford Handbook of Assessment in Music Education pave the way forward for music educators and researchers in the field.

Mental Health Care of Deaf People John Wiley & Sons
Deaf adults and children, like their hearing counterparts, experience a full range of mental health problems. They develop psychoses, sink into deep depressions, abuse alcohol and drugs, commit sexual offenses, or simply have trouble adjusting to new life situations. But when a deaf client appears on the doorstep of an ordinary hospital, residential facility, clinic, or office, panic often ensues. Mental Health Care of Deaf People: A Culturally Affirmative Approach, offers much-needed help to clinical and counseling psychologists, psychiatrists, social workers, nurses, and other mental health professionals--and to their program administrators. The editors, a psychologist and a psychiatrist, and the authors, leading authorities with a variety of expertises, systematically review the special needs of deaf patients, particularly those who regard themselves as "culturally Deaf," and provide professionals with the tools they need to meet those needs. Among these tools is an extensive "library" of pictorial questionnaires and information sheets developed by one of the very few psychiatric units in the country devoted to the deaf. These handouts greatly simplify the processes involved in the diagnosis and treatment of people who in many cases are not good readers--for example, explaining medication and inquiring about side-effects. The handouts are reproduced on a CD included in each copy of the book, to enable purchasers to print out and use copies in their work. This comprehensive clinical guide and its accompanying CD constitute vital resources for all those who seek to provide sensitive, effective mental health care to deaf people.
