Proceedings of the FISITA 2012 World Automotive Congress are selected from nearly 2,000 papers submitted to the 34th FISITA World Automotive Congress, which is held by Society of Automotive Engineers of China (SAE-China) and the International Federation of Automotive Engineering Societies (FISITA). This proceedings focus on solutions for sustainable mobility in all areas of passenger car, truck and bus transportation. Volume 12: Intelligent Transport System (ITS)& Internet of Vehicles focuses on:

- Driver Assistance System
- V2X Communication Technology
- Telematics and Navigation Systems
- Eco Driving Technology
- Harmonization and Regulation of ITS Systems

Above all researchers, professional engineers and graduates in fields of automotive engineering, mechanical engineering and electronic engineering will benefit from this book. SAE-China is a national academic organization composed of enterprises and professionals who focus on research, design and education in the fields of automotive and related industries. FISITA is the umbrella organization for the national automotive societies in 37 countries around the

world. It was founded in Paris in 1948 with the purpose of bringing engineers from around the world together in a spirit of cooperation to share ideas and advance the technological development of the automobile.

The Merger Control Review, edited by Ilene Knable Gotts of Wachtell, Lipton, Rosen & Katz, provides an overview of the process in 38 jurisdictions, as well as a discussion of recent decisions, strategic considerations and likely upcoming developments in Merger Control. Given the ability of most competition agencies with pre-merger notification laws to delay, and even block, a transaction, it is imperative to take each jurisdiction - small or large, new or mature - seriously. It is, therefore, imperative that counsel for such a transaction develops a comprehensive plan prior to, or immediately upon, execution of an agreement concerning where and when to file notification with competition authorities regarding such a transaction. The intended readership of this book comprises both in-house and outside counsel who may be involved in the competition review of cross-border transactions. In our endeavour to keep our readers well informed, we have expanded the jurisdictions covered by this book to include the newer regimes as well with several special chapters covering US,

EU and Chinese Merger Control in Media and Pharmaceutical sectors. Contributors include: Susan Ning, King & Wood Mallesons; James Langenfeld, Navigant; Goenenc Guerkaynak, ELIG; Mr Jordan Ellison, Slaughter and May. Each country section provides an informative overview of recent and expected enforcement trends... A very useful book! - Jean-Yves Art, Associate General Counsel, Microsoft, Belgium

Scores of talented and dedicated people serve the forensic science community, performing vitally important work.

However, they are often constrained by lack of adequate

resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Genomic and Personalized Medicine, Second Edition — winner of a 2013 Highly Commended BMA Medical Book Award for Medicine — is a major discussion of the structure,

history, and applications of the field, as it emerges from the campus and lab into clinical action. As with the first edition, leading experts review the development of the new science, the current opportunities for genome-based analysis in healthcare, and the potential of genomic medicine in future healthcare. The inclusion of the latest information on diagnostic testing, population screening, disease susceptibility, and pharmacogenomics makes this work an ideal companion for the many stakeholders of genomic and personalized medicine. With advancing knowledge of the genome across and outside protein-coding regions of DNA, new comprehension of genomic variation and frequencies across populations, the elucidation of advanced strategic approaches to genomic study, and above all in the elaboration of next-generation sequencing, genomic medicine has begun to achieve the much-vaunted transformative health outcomes of the Human Genome Project, almost a decade after its official completion in April 2003. Highly Commended 2013 BMA Medical Book Award for Medicine More than 100 chapters, from leading researchers, review the many impacts of genomic discoveries in clinical action, including 63 chapters new to this edition Discusses state-of-the-art genome technologies, including population screening, novel diagnostics, and gene-based therapeutics Wide and inclusive discussion encompasses the formidable ethical, legal, regulatory and social challenges related to the evolving practice of genomic medicine Clearly and beautifully illustrated with 280 color

figures, and many thousands of references for further reading and deeper analysis

A Message from the TAIC PART 2010 General Chair TAIC

PART is a unique event that strives to combine aspects of a conference, a workshop and a retreat. Its purpose is to bring together industrialists and academics in an environment that promotes fundamental collaboration on problems in software testing. Among the wide range of topics in computer science and software engineering, software testing is an ideal candidate for academic and industrial collaboration because advances in research can have such wide-ranging and far-reaching implications for industry. Conversely, the advances in computing and communications technology and the growth of the associated software engineering activity are producing new research challenges at an increasing rate. The problems that arise in software testing are related to the problems that arise in many other areas of computing. As such, testing research combines a wide range of elements encompassing the theoretical work of program analysis and formal methods and the associated representations such as finite-state machines and dependence graphs. The inherent complexity of software testing has led to the involvement of heuristic methods. Software testing is also a

human activity and has thus seen the involvement of psychology, sociology and even philosophy. This astonishing breadth and depth have made the problems of software testing appealing to academics for several decades.
