Prostate cancer is by far the most common cancer in men and the second leading cause of death due to cancer. It comprises a mixed group of tumours displaying varying clinical behaviour: while some have a very aggressive course, others are rather indolent. Prevention of prostate cancer and discrimination between aggressive and indolent forms are important clinical goals and the acquisition of significant new evidence on means of achieving these aims makes this book particularly timely. A wide range of topics are covered by leading authorities in the field. The biology and natural history of prostate cancer are reviewed and the role of lifestyle and dietary factors, assessed. Detailed attention is paid to risk prediction biomarkers and to the role of novel high-throughput nucleic acid-based technologies in improving risk prediction and thereby allowing tailored approaches to cancer prevention. Potential means of chemoprevention of prostate cancer are also reviewed in depth, covering the very positive new data on the impact of aspirin as well as evidence regarding 5 -reductase inhibitors, DFMO and lycopene.

Guidance is provided on the differentiation of aggressive from indolent disease and the policy and research implications of recent findings are examined. This book will be of interest to both clinicians and researchers.

The book describes and explains thermally stimulated current depolarization and thermal sampling. Electrical charges are created in the dielectric material by a voltage field. Analyzing how the current discharges provides insights into the atomic structure of the polymer, its organization and free volume. The book also includes case studies teaching how to apply the characterization techniques to understand the behavior of polymers.

This is one of a series of reviews, commissioned by the Chancellor of the Exchequer, accompanying the pre-Budget report 2006 (to be published 6 December 2006, Cm. 6984, ISBN 0101698429). This report considers the long-term skills needs of the UK economy to maximise economic

growth and productivity and to promote social justice and social inclusion. It finds that although the UK's skills base has improved significantly over the last decade, it remains weak by international standards, and even if current targets to improve skills are met, we will still lag behind that of many comparator countries by 2020. The report concludes that a radical step-change is required across the skills spectrum to address these challenges, and it identifies a number of key principles which must underpin delivery of this raised ambition, including shared responsibility between government, employers and individuals; a focus on economically valuable skills which are demand-led; the flexibility to adapt and respond to future market needs; and maintaining continuity where possible by building on existing structures.

Recommendations include: raising adults skills across all levels, including basic levels of literacy and numeracy and shifting the balance of intermediate skills from level 2 to level 3; the creation of a new Commission for Employment and Skills to better articulate employers views on skills; routing all public funding for adult vocational skills in England, apart from community learning, through

Train to Gain and Learner Accounts by 2010; and launching a new Pledge for employers to voluntarily commit to train all eligible employees up to level 2 in the workplace. The report estimates a possible net benefit of at least £ 80 billion over 30 years could be achieved if these objectives are met, arising from increased productivity and employment growth rates.

Given the academic benefits of assessment-driven teaching, and the growing accountability context of educational systems around the world, there is a rapidly developing need to educate teachers in effectively using assessments to promote, monitor, and report on student learning. However, assessment has historically been a neglected area in teacher education programmes, and empirical research has consistently shown assessment as an area of challenge for many teachers. While there is an increased focus across teacher education and professional literature on enhancing the assessment capacity of educators, there remains little empirical research on innovative and data-based strategies to effectively achieve this goal. The purpose of this text is to consolidate existing research on assessment education and to

provoke innovative and effective approaches to educating teachers and teachers-in-training about assessment. Given the dearth of relevant research, this text also considers the matter of retention and extension of initial assessment learning into teaching careers. Combined, the articles in this text provide a foundation for novel thinking about developing teachers' assessment capacity from pre-service to in-service contexts. This book was originally published as a special issue of *Assessment in Education*.

Project scheduling problems are, generally speaking, the problems of allocating scarce resources over time to perform a given set of activities. The resources are nothing other than the arbitrary means which activities complete for. Also the activities can have a variety of interpretations. Thus, project scheduling problems appear in a large spectrum of real-world situations, and, in consequence, they have been intensively studied for almost forty years. Almost a decade has passed since the multi-author monograph: R. Slowinski, I. Węglarz (eds.), *Advances in Project Scheduling*, Elsevier, 1989, summarizing the state-of-the-art across project scheduling problems, was published.

Since then, considerable progress has been made in all directions of modelling and finding solutions to these problems. Thus, the proposal by Professor Frederick S. Hillier to edit a handbook which reports on the recent advances in the field came at an exceptionally good time and motivated me to accept the challenge. Fortunately, almost all leading experts in the field have accepted my invitation and presented their completely new advances often combined with expository surveys. Thanks to them, the handbook stands a good chance of becoming a key reference point on the current state-of-the-art in project scheduling, as well as on new directions in the area. The contents are divided into four parts. The first one, dealing with classical models -exact algorithms, is preceded by a proposition of the classification scheme for scheduling problems.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing

homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.
