This book, now in an extensively revised second edition, provides an exhaustive review of the state of the art in the management of prostate cancer, from screening to treatment, with emphasis on a multidisciplinary approach. The editors are very excited about the outstanding new or updated contributions from the different expert authors. The opening chapters address basic aspects including epidemiology, pathology, biology, genetics, and chemoprevention. The role of individual and mass screening is carefully appraised, and extensive attention is devoted to diagnosis and clinical work-up by means of recently implemented investigations such as multiparametric MRI and choline PET-CT. The use of active surveillance is examined in detail. Subsequent chapters discuss the different therapies that may be employed: open and minimally invasive, including robot-assisted, radical prostatectomy, the various forms of radiation treatment, high-intensity focused ultrasound, cryotherapy, hormonal manipulations, chemotherapy, targeted therapies, and immunotherapy. Up-to-date results from practice-changing phase III randomized clinical trials are included and special insights are provided into the interpretation of results and the patient's perspective.

How to Read a Paper describes the different types of clinical research reporting, and explains how to critically appraise the publications. The book provides the tools to find and evaluate the literature, and implement the findings in an evidence-based, patient-centered way. Written for anyone in the health care professions who has little or no knowledge of evidence-based medicine, it provides a clear understanding of the concepts and how to put them into practice at the basic, clinical level. Changes for the 4th edition The fourth edition will include two new chapters on important developments in health care research and delivery, but otherwise retains its original style, size, and scope. New chapter on quality improvement -- describing papers on quality improvement projects using ebm methods; this will extend the readership to non clinical health care professionals working in hospitals and family practice, and to nurse specialists and practice nurses working in this field New chapter on complex interventions - how to set up research projects involving both qualitative and quantitative methodology (known as mixed methods) Thorough revision and updating of existing chapters and references New illustrations -- diagrammatic representations of ebm concepts

Drug prescribing is one of the most important parts of clinical practice. Yet it remains one of the most commonly failed components of undergraduate assessments, and accounts for an uncomfortably high proportion of medical errors. To remedy this, the Prescribing Safety Assessment (PSA) exam has been introduced in the UK. It is compulsory and will set a minimum standard for safe prescribing. Failure will preclude GMC registration. Pass the PSA is written specifically for the exam, with one chapter dedicated to each PSA section. Each chapter includes: The marking scheme for the PSA exam section and how to approach it. All the theory condensed into a few pages of memorable, illustrated text. Multiple worked questions covering the most common exam scenarios. In addition: Introduces a simple, memorable and failsafe approach to prescribing (the 'PRESCRIBER' mnemonic). Specifies the universal basic principles of prescribing for all sections. Over 300 worked questions, structured identically to the exam. Data interpretation made memorable and simple including ECG, ABGs, chest X-rays and basic bloods. Common traps highlighted throughout. Two mock exams.

Presenting the end-use and application technologies of pressure-sensitive adhesives and products, Volume Three of the Handbook of Pressure-Sensitive Adhesives and Products discusses the build up and classes of pressure-sensitive products, the main representatives of pressure-sensitive products, and their application domains. It divides the main product classes of solvent-based, water-based, and hot-melt-based formulations by their debonding characteristics and water and temperature resistance, and illustrates build-up by adhesive-coated, adhesiveless, carrierless, and linerless pressure-sensitive products. It presents application technology, equipment, and novel products such as RFID, medical, and labels, as well as the self-adhesive competitors of pressure-sensitive products. It also lists professional organizations and suppliers, along with the main literature sources.
