This book contains ten writings on different aspects of international law, each of them cross-referenced, in instances in which information in one is relevant to points made in another. The first essay considers the character of the subject, and its relation to other entities of relevance to it, such as its compatibility with national law and its relation to maritime law. The second one considers different types of legal

instruments in settings of international law, and explains how to read a multilateral convention, using the Convention for the International Sale of Goods as an example. The third part discusses the characteristics of a state and the concept of recognition, the fourth reviews the various roles that institutions take in international law, concentrating in particular on major regional organisations, and the fifth explores the extent to which the World Trade Organisation and the General Agreement on Tariffs and Trade provide for developing countries. Essay Six summarises the framework for international labour law and investigates its contents and workings, then the seventh considers which

countries predominate in the running of international institutions. The eighth paper explores how regional entities might co-operate with international institutions in the harmonisation of the law, and the ninth one investigates the place of negotiation as a method of international dispute resolution. Finally, the tenth essay considers the past, present and future of international law, and reviews especially the role of language.

The use of electronic commerce in international trade is growing by leaps and bounds. No one can dispute the need for a system of rules to guide countries as well as private commercial parties through the many new developments and issues that arise. The United Nations Convention on the Use of Electronic Communications in International Contracts (ECC), adopted by the United Nations General Assembly in December 2005 and currently undergoing the ratification process, provides such a system. This book is a

guide and resource on the Convention: its evolution, interpretation, and relationship to domestic laws throughout the world. The book represents the outcome of a conference held at the Leibniz University of Hannover in September 2007. It consists of an introduction to the drafting of the Convention, expert commentary on each article, and perspectives in the context of domestic and substantive law. A distinguished panel of authorities representatives of governments, international organizations, transnational companies, and universities, as well as practising attorneys, all of whom have been active domestically and internationally in confronting the legal issues of

electronic commerce discuss such aspects of the ECC as the following: timing of dispatch and receipt of electronic communications; transactions related to the financial sector; altering the scope of the Convention by contract; 'opting in' and 'opting out'; 'choice of law' versus 'party autonomy'; use of foreign case law to interpret the Convention; legal information requirements; writing and signature requirements; error in electronic communications; and problems of identity and data integrity. Several authors provide in-depth analysis of the interaction between ECC provisions and other relevant legal regimes (including the United States, ASEAN, the EU, Sri

Lanka, India, and China), as well as the interrelations between the ECC and ICC rules, rules under the CISG, and the trade usages of the *lex mercatoria*. The various contributors highlight issues arising from each ECC provision, and provide well-informed insight into how remaining problems are likely to be resolved as the Convention enters into force. Stakeholders from all concerned sectors of the legal community businesspersons and their counsel, IGO and government officials, and academics will benefit greatly from the detailed information, analysis, and guidance offered here.
