Using diverse examples from published research, the Third Edition of *The Process of Research in Psychology* by Dawn M. McBride provides step-by-step coverage on how to design, conduct, and present a research study. Early chapters introduce important concepts for developing research ideas while subsequent "nuts and bolts" chapters provide more detailed coverage of topics and examine the types of research relevant to the field. This logical two-part structure creates an excellent foundation upon which students can build their knowledge of the entire research process.

From Pavlov's dog expecting food when hearing a bell to

stereotypes as expectations about other people's behaviour, from Bandura's self-efficacy as expectation for success and failure of one's own behaviour to the "predictive brain" concept in current perception theories: expectations have been a central construct in different areas of psychological research. In each of these areas, specific concepts, theoretical approaches, and empirical methods have been developed to explain when and why expectations persist and when they do not. Many theories assume that expectations are likely to change in the face of disconfirming evidence. However, sometimes expectations persist even though they are empirically violated, suggesting that they can be "sticky" under certain circumstances. But what are these circumstances? And what are the psychological mechanisms that can explain why and when expectations persist or change after being confronted with expectation-violating evidence? Each contribution of the current book offers insights into individuals' reactions to violations of expectations. They show that many pieces of the puzzle have been collected in the many sub-disciplines of psychology and that putting them together in an integrative fashion stays a fascinating enterprise.

Advertising is a ubiquitous and powerful force, seducing us into buying wanted and sometimes unwanted products and services, donating to charitable causes, voting for political candidates, and changing our health-related lifestyles for better or worse. The impact of advertising is often subtle and implicit, but sometimes blatant and impossible to overlook. This revised and fully updated new edition of *The Psychology of Advertising* offers a comprehensive and state-of-the-art overview of the psychological findings on the impact of advertising, and discusses the research in the context of recent developments in the fields of social and consumer psychology. Key questions covered in the volume include: What impact does advertising have on consumer behavior? What causes this impact? What are the psychological processes responsible for the effectiveness of advertising? How do consumers make sense of advertising messages? Which messages "get across" successfully and when, and why? How do new online and digital technologies affect consumer judgement and choice? Engagingly written, and including a comprehensive glossary of frequently used concepts, *The Psychology of Advertising* is a unique and invaluable resource for advanced undergraduate and graduate students, and for researchers and lecturers in social psychology, marketing, and communications. It is also a valuable guide for professionals working in advertising, public health, public services and political communication.

Online Consumer Psychology addresses many of the issues created by the Internet and goes beyond the topic of advertising and the Web to include topics such as customization, site design, word of mouth processes, and the study of consumer decision making while online. The theories and research methods help provide greater insight into the processes underlying consumer behavior in online environments. Broken into six sections, this book: focuses on community and looks at the Internet's ability to bring like-minded individuals from around the world into one forum; examines issues related to advertising, specifically click-through rates and advertising content placed within gaming online and wireless networks; provides readers with reasons why

consumers customize products and the benefits of customization; discusses the psychological effects of site design; asks the question of whether the Internet empowers consumers to make better decisions; and discusses research tools that can be used online.
