WRITING FOR PSYCHOLOGY, Fourth Edition offers concise assistance for students writing their research analyses using APA style. By providing concrete examples of common errors, the authors show rather than merely tell students what to do and what to avoid. This manual will help students adhere to the basics of APA style; refine critical thinking skills, library search skills, revising skills, editing skills, and proofing skills; and avoid plagiarism. Checklists precede a summary at the end of every chapter, giving students the chance to make sure they have been thorough in their reports. Doing Collaborative Research in Psychology offers an engaging journey through the process of conducting research in psychology. Using an innovative team-based approach, this hands-on guide will assist undergraduates with their research—in their courses and in collaboration with faculty or graduate student mentors. The focus on this team-based approach reflects the collaborative nature of research methods and experimental psychology. Students learn how to work as a team, generate creative research ideas, design and pilot studies, recruit participants, collect and analyze data, write up results in APA style, and prepare and give formal research presentations. Students also learn practical ways in which they can promote their research skills as they apply to jobs or graduate school. A unique feature to this book is the ability to read chapters of the text either sequentially or separately, which allows the instructor or research mentor the flexibility to assign those chapters most relevant to the current state of the research project.

A guide to an evidence-based approach for teaching college-level psychology courses **Teaching Psychology** offers an evidence-based, student-centered approach that is filled with suggestions, ideas, and practices for teaching college-level courses in ways that contribute to student success. The authors draw on current scientific studies of learning, memory, and development, with specific emphasis on classroom studies. The authors offer practical advice for applying scholarly research to teaching in ways that maximize student learning and personal growth. The authors endorse the use of backward course design, emphasizing the importance of identifying learning goals (encompassing skills and knowledge) and how to assess them, before developing the appropriate curriculum for achieving these goals. Recognizing the diversity of today's student population, this book offers guidance for culturally responsive, ethical teaching. The text explores techniques for teaching critical thinking, qualitative and quantitative reasoning, written and oral communication, information and technology literacy, and collaboration and teamwork. The authors explain how to envision the learning objectives teachers want their students to achieve and advise how to select assessments to evaluate if the learning objectives are being met. This important resource: Offers an evidence-based approach designed to help graduate students and new instructors embrace a student-centered approach to teaching; Contains a wealth of examples of effective student-centered teaching techniques; Surveys current findings from the Scholarship of Teaching and Learning; Draws on the American Psychological Association's five broad goals for the undergraduate Psychology major and shows how to help students build life-long skills; and, Introduces Universal Design for Learning as a framework to support diverse learners. **Teaching Psychology** offers an essential guide to evidence-based teaching and provides practical advice for becoming an effective teacher. This book is designed to help graduate students, new instructors, and those wanting to update their teaching methods. It is likely to be particularly useful for instructors in psychology and other social science disciplines.

The Psychology Major's Handbook offers students a wealth of practical information to succeed throughout their college journey—from choosing a major and learning how to study to writing papers and deciding what to do after graduation. Drawing on over 20 years of experiences, questions, ideas, and enthusiasm from working with students, best-selling author Tara L. Kuther covers topics relevant to all learners regardless of major, such as developing an active learning style, honing study skills, and becoming more self-aware. The handbook also addresses the specific needs of psychology students with guidance on the process of writing terms papers, how to read articles, and how to write APA-Style empirical reports. Thoroughly revised, the Fifth Edition emphasizes psychological literacy and pays particular attention to the role of technology and social media in students' lives.

Research Methods for Forensic Psychologists Emerald Group Publishing

This popular text combines theory, research, and applications to teach college students how to become more self-directed learners. The focus is on relevant information and features designed to help students to identify the components of academic learning that contribute to high achievement, to master and practice effective learning and study strategies, and then to complete self-management studies whereby they are taught a process for improving their academic behavior. A framework organized around six components related to academic success (motivation, methods of learning, time management, control of the physical and social environment, and monitoring performance) makes it easy for students to understand what they need to do to become more successful in the classroom.

This text is about doing science and the active process of reading, learning, thinking, generating ideas, designing experiments, and the logistics surrounding each step of the research process. In easy-to-read, conversational language, Kim MacLin teaches students experimental design principles and techniques using a tutorial approach in which students read, critique, and analyze over 75 actual experiments from every major area of psychology. She provides them with real-world information about how science in psychology is conducted and how they can participate. Recognizing that students come to an experimental design course with their own interests and perspectives, MacLin covers many subdisciplines of psychology throughout the text, including IO psychology, child psychology, social psychology, behavioral psychology, cognitive psychology, clinical psychology, health psychology, educational/school psychology, legal psychology, and personality psychology, among others. Part I of the text is content oriented and provides an overview of the principles of experimental design. Part II contains annotated research articles for students to read and analyze. Classic articles have been retained and 11 new ones have been added, featuring contemporary case studies, information on the Open Science movement, expanded coverage on ethics in research, and a greater focus on becoming a better writer, clarity and precision in writing, and reducing bias in language. This edition is up to date with the latest APA Publication Manual (7th edition) and includes an overview of the updated bias-free language guidelines, the use of singular "they," the new ethical compliance checklist, and other key changes in APA style. This text is essential reading for students and researchers interested in and studying experimental design in psychology.

Research Methods for Forensic Psychologists is an accessible and comprehensive textbook that introduces students to the research process in forensic psychology. Adopting a problem-based learning approach, this book offers a 'how-to' guide to the whole research process and empowers readers to develop their own programme of research, from initial vague ideas, to developing a research question, to carrying out a methodologically rigorous research project, to disseminating the findings. The text is centred on five case studies, sufficiently different in nature to address the most common research methodologies. Each case study is linked with a specific research question that will be used to illustrate the research process throughout the rest of the book. Topics covered in the book include: Design and Planning, including a literature search, a discussion of different sorts of data, practical and feasibility issues, research ethics and developing a research proposal. Conducting research, including the submission of ethics proposals and responding to feedback, collecting data and dealing with the problems and challenges of analysing data. Dissemination of findings, an overview of the different types of papers, with examples listed and other methods of disseminating findings discussed, such as conference presentations and the use of social media. Throughout, issues of common difficulty or confusion are highlighted and activities are provided for readers to consider and apply the information discussed further. Additional reading sections and summaries are also provided at the end of each chapter. This book is essential reading for advanced students in Forensic Psychology, as well as trainees and practitioners within relevant forensic psychology organisations.

Engaging and well-written research methods textbooks such as this one are a plus for students and instructors. Evans' text is a welcome addition to what is currently available.

It is one of the more impressive research methods texts I have reviewed over the years.

Jennifer Myers, University of Michigan Methods in Psychological Research is pedagogically driven, interactive, and highly applied to engage and motivate students who are taking what is often considered to be a 'drudgery' requirement. Authors Annabel Ness Evans and Bryan J.

Rooney present this brief and basic introduction to research methods in psychology in a relaxed style, at a moderate level of detail, and with a rich mix of pedagogy to encourage students from a variety of backgrounds and academic preparation and to help connect students to the material. The authors offer an applied approach, emphasizing doing research with simple in-text exercises that are more interactive than those found in most methods textbooks. They also provide examples of real psychology research, both from the research literature and, uniquely, from student research projects. This friendly and supportive presentation of the basics conveys to students the excitement and fun of the research enterprise and involves them in doing research rather than just memorizing another term for an exam. Key Features - Employs a casual, relaxed style of writing. The authors make frequent use of 'FYI' boxes, which provide cautionary notes to students and more fully explain certain difficult or confusing concepts. Incorporates useful pedagogical tools. Each chapter begins with clear objectives to which students can refer to get a snapshot of the material that they are about to read. End-

of-chapter summaries are followed by chapter exercises and chapter projects, which are designed to test whether students have mastered those objectives and to encourage them to apply what they've learned in the chapter. Contains unique 'FAQ' sections. In class, students perpetually have problems with certain fundamental concepts. A question-and-answer section at the end of each chapter anticipates these questions to help students tackle and understand especially tricky, confusing, or difficult topics. Author-Created Ancillaries Available The text is accompanied by an Instructor's Resource CD-ROM and a Student Study Site at www.sagepub.com/evansmprstudy, both of which include material created by the authors themselves.
