A New York Times Notable Book: A psychologist's "gripping and thought-provoking" look at how and why our brains

sometimes fail us (Steven Pinker, author of *How the Mind Works*). In this intriguing study, Harvard psychologist Daniel L. Schacter explores the memory miscues that occur in everyday life, placing them into seven categories: absent-mindedness, transience, blocking, misattribution, suggestibility, bias, and persistence. Illustrating these concepts with vivid examples—case studies, literary excerpts, experimental evidence, and accounts of highly visible news events such as the O. J. Simpson verdict, Bill Clinton’s grand jury testimony, and the search for the Oklahoma City bomber—he also delves into striking new scientific research, giving us a glimpse of the fascinating neurology of memory and offering “insight into common malfunctions of the mind” (*USA Today*). “Though memory failure can amount to little more than a mild annoyance, the consequences of misattribution in eyewitness testimony can be devastating, as can the consequences of suggestibility among pre-school children and among adults with ‘false memory syndrome’ . . . Drawing upon recent neuroimaging research that allows a glimpse of the brain as it learns and remembers, Schacter guides his readers on a fascinating journey of the human mind.” —*Library Journal* “Clear, entertaining and provocative . . . Encourages a new appreciation of the complexity and fragility of memory.” —*The Seattle Times* “Should be required reading for police, lawyers, psychologists, and anyone else who wants to understand how memory can go terribly wrong.” —*The Atlanta Journal-Constitution* “A fascinating journey through paths of memory, its open avenues and blind alleys . . . Lucid, engaging, and enjoyable.” —Jerome Groopman, MD “Compelling in its science and its probing

examination of everyday life, *The Seven Sins of Memory* is also a delightful book, lively and clear.” —*Chicago Tribune* Winner of the William James Book Award

Clinical neuropsychologists frequently evaluate individuals within a forensic context, and therefore must address questions regarding the possible presence of reduced effort, response bias and/or malingering. This volume offers a wide range of instructive real-world case examples involving the complex differential diagnosis where symptom exaggeration and/or malingering cloud the picture. Written by expert forensic neuropsychologists, the scenarios described provide informed, empirically-based and scientifically-derived opinions on the topic. Issues related to malingering, such as response bias and insufficient effort, are discussed thoroughly with regard to a large number of clinical conditions and assessment instruments. Test data and non-test information are considered and integrated by the numerous experts. Expert guidance for clinicians who must address the issue of malingering is provided in a straightforward and well-organized format. To date, there has not been a comparable collection of rich case material relevant to forensic practice in clinical

neuropsychology.

Psychological Testing: A Practical Introduction 4e offers students of psychology and allied disciplines a comprehensive survey of psychometric principles and tests in the major categories of applied assessment. Coverage includes test norms, reliability, validity, and test development, with an entirely new chapter on test fairness and bias. Chapters on assessment of cognitive ability, achievement, personality, clinical instruments, and attitudes provide up-to-date examples of the widely used tests in each category. Recognizing that active engagement maximizes learning, the text presents as an active learning device rather than a reference work. Extensive use of chapter objectives, key point and end-of-chapter summaries, practice problems, applied scenarios, internet-based resources, and statistics skills review enable students to engage more fully with the material for a deeper understanding. Written in a clear, reader-friendly style, the text approaches challenging topics by balancing technical rigor with relatable examples of contemporary applications.

Introduction to Psychology SAGE Publications

The new edition of this brief introductory text retains the hallmark features that have made its parent text unique, while offering a more manageable, student-friendly format. The book was written with three goals in mind: to

make the study of psychology accessible and engaging to the beginning student in psychology, to provide students with a solid grounding in the knowledge base in psychology, and to help students succeed in the course. Nevid's comprehensive learning system-derived from research on memory, learning, and textbook pedagogy-is featured throughout. This learning model incorporates what the author calls the Four E's of Effective Learning-Engaging Student Interest, Encoding Information, Elaborating Meaning, and Evaluating Progress. ESSENTIALS OF PSYCHOLOGY: CONCEPTS AND APPLICATIONS, 4th Edition, provides a broad view of psychology as well as applications of the knowledge gained from contemporary research to the problems and challenges we face in today's world. Developmental Psychology: From infancy to adulthood, 3rd edition, continues to bring together a balanced focus on Australian and international research contributions in developmental psychology. Students and lecturers alike will find this text addresses the issues of lifespan development in a rigorous and challenging way using a thematic rather than chronological

approach. International and national research on graduate attributes consistently identifies critical thinking as one of the most important skills for psychology students. The inclusion of Critical Thinking for Group Discussion at the end of each chapter is designed to encourage students in the development of this key skill. These questions help students develop the ability to engage in discussions on truth and validity and evaluate the relative importance of ideas and data. Students learn by doing, and this is encouraged through interactive features such as Stop and Review, Research Focus Boxes, and Practical Exercises which engage them in group discussion and challenge them to delve into complex and cross-domain analysis of lifespan development. Concept maps at the start of each chapter provide students with a visual snapshot of the chapter content.
