Psychology Macmillan Higher Education

This book is the first to bring together research material from different communities,

Computer Science and especially Artificial Intelligence, and Social Sciences, e.g.

Anthropology, Social Psychology, Political Science that present ideas and viewpoints,

methods and models on inter-cultural collaboration and negotiation. With increasing

globalization of business and science, cultural differences of the parties are an important

factor that affects the process and outcomes of collaborative and self-interested interactions.

The social science literature on culture as well as human collaboration and negotiation is vast.

Most of this literature is devoted to work within the same culture. Artificial intelligence researchers, on the other hand, have developed computational models of cooperation, conflict resolution and negotiation, but paying almost no attention to identifying and modeling cultural factors. In recent years, we have witnessed a great increase in interest in understanding inter-cultural interactions. This has led to increased interest of social scientists and computational scientists in theoretical and experimental analysis of inter-cultural exchanges, modeling and support. Currently, these communities are largely unconnected. There is a great need to bring them together to share research work and experiences, discuss ideas and forge interdisciplinary collaborative relations. This book will be of interest to researchers from AI/computer science and

social/behavioral sciences fields, such as psychology, sociology, communications, organizational science.

Factorial Studies of Intelligence Macmillan

This volume seeks to identify and define the parameters of a relatively new problem area -- parental development. Drawing on the grand developmental theories of Sigmund Freud, Lawrence Kohlberg, Jean Piaget, Lev Vygotsky, Heinz Werner, and their descendants, this book has the potential to generate an area of common concern for those interested in either child/adolescent or adult development through the novel application of developmental principles and considerations to the ecological context of parenting. To that end, this volume brings together theory and research from the subfields of adult and child/adolescent development. Chapter authors place the problem area of parental development in theoretical context and examine selected psychological part-processes implicated by

focusing on cognitive and psychosocial development.

The authors then deal with a range of issues that are perhaps less traditional and/or more in line with the complex character of everyday life. That is, they utilize either relatively novel comparison groups or treat parents at later stages of development rather than those in young adulthood as is often the case. Finally, the authors uncover both similarities and differences among their theoretical perspectives with an eye toward delineating some possible future research directions.
