How reliable is our intuition? How much should we depend on gut-level instinct rather than rational analysis when we play the stock market, choose a mate, hire an employee, or assess our own abilities? In this engaging and accessible book, David G. Myers shows us that while intuition can provide us with useful—and often amazing—insights, it can also dangerously mislead us. Drawing on recent psychological research, Myers discusses the powers and perils of intuition when:

- judges and jurors determine who is telling the truth;
- mental health workers predict whether someone is at risk for suicide or crime;
- coaches, players, and fans decide who has the hot hand or the hot bat;
- personnel directors hire new employees;
- psychics claim to be clairvoyant or to have premonitions;
- and much more.

Socrates, Plato, Descartes, Spinoza, Mesmer, William James, Pavlov, Freud, Piaget, Erikson, and Skinner. Each of these thinkers recognized that human beings could examine, comprehend, and eventually guide or influence their own thought processes, emotions, and resulting behavior. The lives and accomplishments of these pillars of psychology, expertly assembled by Morton Hunt, are set against the times in which the subjects lived. Hunt skillfully presents dramatic and lucid accounts of the techniques and validity of centuries of psychological research, and of the methods and effectiveness of major forms of psychotherapy. Fully revised, and incorporating

the dramatic developments of the last fifteen years, *The Story of Psychology* is a graceful and absorbing chronicle of one of the great human inquiries—the search for the true causes of our behavior.

Updated Myers' Psychology for the AP® Course Psychology Press

This volume seeks to identify and define the parameters of a relatively new problem area -- parental development. Drawing on the grand developmental theories of Sigmund Freud, Lawrence Kohlberg, Jean Piaget, Lev Vygotsky, Heinz Werner, and their descendants, this book has the potential to generate an area of common concern for those interested in either child/adolescent or adult development through the novel application of developmental principles and considerations to the ecological context of parenting. To that end, this volume brings together theory and research from the subfields of adult and child/adolescent development. Chapter authors place the problem area of parental development in theoretical context and examine selected psychological part-processes implicated by focusing on cognitive and psychosocial development. The authors then deal with a range of issues that are perhaps less traditional and/or more in line with the complex character of everyday life. That is, they utilize either relatively novel comparison groups or treat parents at later stages of development rather than those in young adulthood as is often the case. Finally, the authors uncover both similarities and

differences among their theoretical perspectives with an eye toward delineating some possible future research directions.

This book is the first to bring together research material from different communities, Computer Science and especially Artificial Intelligence, and Social Sciences, e.g. Anthropology, Social Psychology, Political Science that present ideas and viewpoints, methods and models on inter-cultural collaboration and negotiation. With increasing globalization of business and science, cultural differences of the parties are an important factor that affects the process and outcomes of collaborative and self-interested interactions. The social science literature on culture as well as human collaboration and negotiation is vast. Most of this literature is devoted to work within the same culture. Artificial intelligence researchers, on the other hand, have developed computational models of cooperation, conflict resolution and negotiation, but paying almost no attention to identifying and modeling cultural factors. In recent years, we have witnessed a great increase in interest in understanding inter-cultural interactions. This has led to increased interest of social scientists and computational scientists in theoretical and experimental analysis of inter-cultural exchanges, modeling and support. Currently, these communities are largely unconnected. There is a great need to bring them together to share research work and experiences, discuss ideas and forge interdisciplinary collaborative relations. This book will be of interest to researchers from AI/computer science and social/behavioral sciences fields, such as

psychology, sociology, communications, organizational science.

Thinking for Clinicians provides analysts of all orientations with the tools and context for working critically within psychoanalytic theory and practice. It does this through detailed chapters on some of the philosophers whose work is especially relevant for contemporary theory and clinical writing: Emmanuel Levinas, Martin Buber, Ludwig Wittgenstein, Maurice Merleau-Ponty, and Hans-Georg Gadamer. Orange presents the historical background for their ideas, along with clinical vignettes to help contextualize their theories, further grounding them in real-world experience. With a hermeneutic sensibility firmly in mind, Thinking for Clinicians rewards as it challenges and will be a valuable reference for clinicians who seek a better understanding of the philosophical bases of contemporary psychoanalytic theory.

This book is a complete introduction to the power of R for marketing research practitioners. The text describes statistical models from a conceptual point of view with a minimal amount of mathematics, presuming only an introductory knowledge of statistics. Hands-on chapters accelerate the learning curve by asking readers to interact with R from the beginning. Core topics include the R language, basic statistics, linear modeling, and data visualization, which is presented throughout as an integral part of analysis. Later chapters cover more advanced topics yet are intended to be approachable for all analysts. These sections examine logistic regression, customer segmentation, hierarchical linear modeling, market basket analysis, structural equation modeling, and conjoint analysis in R. The text uniquely presents Bayesian models with a minimally complex approach, demonstrating and explaining Bayesian methods alongside traditional analyses for analysis of

variance, linear models, and metric and choice-based conjoint analysis. With its emphasis on data visualization, model assessment, and development of statistical intuition, this book provides guidance for any analyst looking to develop or improve skills in R for marketing applications.
