As the recent financial crisis has revealed, the state is central to the stability of the money system, while the chaotic privately-owned banks reap the benefits without shouldering the risks. This book argues that money is a public resource that has been hijacked by capitalism. Mary Mellor explores the history of money and modern banking, showing how finance capital has captured bank-created money to enhance speculative leveraged profits as well as destroying collective approaches to economic life. Meanwhile, most individuals, and the public economy, have been mired in debt. To correct this obvious injustice, Mellor proposes a public and democratic future for money. Ways are put forward for structuring the money and banking system to provision societies on an equitable, ecologically sustainable sufficiency basis. This fascinating study of money should be read by all economics

students looking for an original analysis of the economy during the current crisis.

**Dimensions in Law and Interdisciplinary Research** Rowman & Littlefield

Research universities are critical contributors to our national research enterprise. They are the principal source of a world-class labor force and fundamental discoveries that enhance our lives and the lives of others around the world. These institutions help to create an educated citizenry capable of making informed and crucial choices as participants in a democratic society. However many are concerned that the unintended cumulative effect of federal regulations undercuts the productivity of the research enterprise and diminishes the return on the federal investment in research. *Optimizing the Nation's Investment in Academic Research* reviews the regulatory framework as it currently exists, considers specific regulations that have placed undue and often unanticipated burdens on the research enterprise, and reassesses the process by which these regulations are created, reviewed, and retired. This review is critical to strengthen the partnership between the federal government and research institutions, to maximize the creation of new knowledge and products, to provide for the effective training and education of the next generation of scholars and workers, and to

optimize the return on the federal investment in research for the benefit of the American people.

### **The Future of Money** Pluto Press

This volume contains the correspondence between G.L.S. Shackle and S.F. Frowen from the time Shackle took up his first post-war academic appointment until his death in 1992. The correspondence, partly personal and partly professional, reveals a vital insight into Shackle both as a man and as an outstanding economist. His letters illuminate his thoughts on issues occupying his mind but also show the warmth and tremendous generosity he felt towards his friends. The centenary of Shackle's birth in 2003 seems an appropriate time for the publication of his letters.

The Handbook of Public Finance provides a definitive source, reference, and text for the field of public finance. In 18 chapters it surveys the state of the art - the tradition and breadth of the field but also its current status and recent developments. The Handbook's intellectual foundation and orientation is truly multidisciplinary. Throughout its examination of the standard material of public finance, it explores the connections between that material and such neighboring fields as political science, sociology, law, and public administration.

The editors and contributors to the Handbook are distinguished scholars who write clearly and accessibly about the political economy of government budgets and their policy implications. To address the needs and interests of international scholars, they place European issues next to the American agenda and give attention to the issues of transformation in Central Eastern Europe and elsewhere. General Editors: Jürgen G. Backhaus, University of Erfurt Richard E. Wagner, George Mason University Contributors: Andy H. Barnett, Charles B. Blankart, Thomas E. Borcherding, Rainald Borck, Geoffrey Brennan, Giuseppe Eusepi, J. Stephen Ferris, Fred E. Folvarty, Andrea Garzoni, Heinz Grossekkettler, Walter Hettich, Scott Hinds, Randall G. Holcombe, Jean-Michel Josselin, Carla Marchese, Alain Marciano, William S. Peirce, Nicholas Sanchez, David Schap, A. Allan Schmid, Russell S. Sobel, Stanley L. Winer, Bruce Yandle.

This book introduces and develops Contract Governance as a new approach to contract theory. While the concept of governance has already been developed in Williamson's seminal article, it has, ironically, not received much attention in general contract law theory. Indeed, Contract Governance appears to be an important and necessary complement to corporate governance and in fact, as the second, equally important pillar of governance research in the core of private law. With this in mind, Grundmann, Möslin, and Riesenhuber provide a novel approach in setting an international and interdisciplinary research agenda for developing contract law scholarship. Contract Governance focuses particularly on the ways in which a governance perspective leads to research questions that have been neglected in traditional contract law scholarship, and how, from a governance perspective, the questions are dealt with in a different manner and style. Combining substantive chapters and commentaries, this collection of essays addresses an array of topics, including: third party impact and contract governance problems in herd behaviour; governance of networks of contracts; governance in long-term contractual relationships; contract governance and rule setting; and contract governance and political dimensions.

This book criticizes the widespread view that the 1997 Asian crisis was due to 'crony capitalism' and puts the blame instead on misguided liberalization. It analyzes the case of Korea's business conglomerates, the chaebol, with particular attention to the car industry, to show how liberalization contributed to the crisis even at the level of the firm. It shows how those firms that had developed innovative capabilities survived the crisis much better than those that had merely expanded into markets opened up by liberalization. Principles of Accounting is designed to meet the scope and sequence requirements of a two-semester accounting course that covers the fundamentals of financial and managerial accounting. This book is specifically designed to appeal to both accounting and non-accounting majors, exposing students to the core concepts of accounting in familiar ways to build a strong foundation that can be applied across business fields. Each chapter opens with a relatable real-life scenario for today's college student. Thoughtfully designed examples are presented throughout each chapter, allowing students to build on emerging accounting knowledge. Concepts are

We undertake an extended discussion of the latest developments about the existing and new estimation methods of the shadow economy. New results on the shadow economy for 158 countries all over the world are presented over 1991 to 2015. Strengths and weaknesses of these methods are assessed and a critical comparison and evaluation of the methods is carried out. The average size of the shadow economy of the 158 countries over 1991 to 2015 is 31.9 percent. The largest ones are Zimbabwe with 60.6 percent, and Bolivia with 62.3 percent of GDP. The lowest ones are Austria with 8.9 percent, and Switzerland with 7.2 percent. The new methods, especially the new macro method, Currency Demand Approach (CDA) and Multiple Indicators Multiple Causes (MIMIC) in a structured hybrid-model based estimation procedure, are promising approaches from an econometric standpoint, alongside some new micro estimates. These estimations come quite close to others used by statistical offices or based on surveys.
