Michael Meeropol argues that the ballooning of the federal budget deficit was not a serious problem in the 1980s, nor were the successful recent efforts to get it under control the basis for the prosperous economy of the mid-1990s. In this controversial book, the author provides a close look at what actually happened to the American economy during the years of the "Reagan Revolution" and reveals that the huge deficits had no negative effect on the economy. It was the other policies of the Reagan years--high interest rates to fight inflation, supply-side tax cuts, reductions in regulation, increased advantages for investors and the wealthy, the unraveling of the safety net for the poor--that were unsuccessful in generating more rapid growth and other economic improvements. Meeropol provides compelling evidence of the failure of the U.S. economy between 1990 and 1994 to generate rising incomes for most of the population or improvements in productivity. This caused, first,

---

the electoral repudiation of President Bush in 1992, followed by a repudiation of President Clinton in the 1994 Congressional elections. The Clinton administration made a half-hearted attempt to reverse the Reagan Revolution in economic policy, but ultimately surrendered to the Republican Congressional majority in 1996 when Clinton promised to balance the budget by 2000 and signed the welfare reform bill. The rapid growth of the economy in 1997 caused surprisingly high government revenues, a dramatic fall in the federal budget deficit, and a brief euphoria evident in an almost uncontrollable stock market boom. Finally, Meeropol argues powerfully that the next recession, certain to come before the end of 1999, will turn the predicted path to budget balance and millennial prosperity into a painful joke on the hubris of public policymakers. Accessibly written as a work of recent history and public policy as much as economics, this book is intended for all Americans interested in issues of economic policy, especially the budget deficit and the Clinton versus Congress debates. No specialized training in economics is needed. "A wonderfully accessible discussion of contemporary American economic policy. Meeropol demonstrates that the Reagan-era policies of tax cuts and shredded safety nets, coupled with strident talk of balanced budgets, have been continued and even brought to fruition by the neo-liberal Clinton regime." --Frances Fox Piven, Graduate School, City University of New York Michael Meeropol is Chair and Professor of Economics, Western New England College.

" Pollan keeps you turning the pages . . .  
clear-eyed and assured. " —New York Times A  
#1 New York Times Bestseller, New York Times  
Book Review 10 Best Books of 2018, and New  
York Times Notable Book A brilliant and brave  
investigation into the medical and scientific  
revolution taking place around psychedelic  
drugs--and the spellbinding story of his own life-  
changing psychedelic experiences When  
Michael Pollan set out to research how LSD and  
psilocybin (the active ingredient in magic  
mushrooms) are being used to provide relief to  
people suffering from difficult-to-treat  
conditions such as depression, addiction and  
anxiety, he did not intend to write what is  
undoubtedly his most personal book. But upon  
discovering how these remarkable substances are  
improving the lives not only of the mentally ill  
but also of healthy people coming to grips with  
the challenges of everyday life, he decided to  
explore the landscape of the mind in the first  
person as well as the third. Thus began a singular  
adventure into various altered states of  
consciousness, along with a dive deep into both  
the latest brain science and the thriving  
underground community of psychedelic  
therapists. Pollan sifts the historical record to  
separate the truth about these mysterious drugs  
from the myths that have surrounded them since

the 1960s, when a handful of psychedelic  
evangelists inadvertently catalyzed a powerful  
backlash against what was then a promising field  
of research. A unique and elegant blend of  
science, memoir, travel writing, history, and  
medicine, *How to Change Your Mind* is a  
triumph of participatory journalism. By turns  
dazzling and edifying, it is the gripping account of  
a journey to an exciting and unexpected new  
frontier in our understanding of the mind, the  
self, and our place in the world. The true subject  
of Pollan's "mental travelogue" is not just  
psychedelic drugs but also the eternal puzzle of  
human consciousness and how, in a world that  
offers us both suffering and joy, we can do our  
best to be fully present and find meaning in our  
lives.

The Republic of Plato is the longest of his  
works with the exception of the Laws, and is  
certainly the greatest of them. There are nearer  
approaches to modern metaphysics in the  
Philebus and in the Sophist; the Politicus or  
Statesman is more ideal; the form and  
institutions of the State are more clearly drawn  
out in the Laws; as works of art, the  
Symposium and the Protagoras are of higher  
excellence. But no other Dialogue of Plato has  
the same largeness of view and the same

---

perfection of style; no other shows an equal knowledge of the world, or contains more of those thoughts which are new as well as old, and not of one age only but of all. Nowhere in Plato is there a deeper irony or a greater wealth of humour or imagery, or more dramatic power. Nor in any other of his writings is the attempt made to interweave life and speculation, or to connect politics with philosophy. The Republic is the centre around which the other Dialogues may be grouped; here philosophy reaches the highest point (cp, especially in Books V, VI, VII) to which ancient thinkers ever attained. Plato among the Greeks, like Bacon among the moderns, was the first who conceived a method of knowledge, although neither of them always distinguished the bare outline or form from the substance of truth; and both of them had to be content with an abstraction of science which was not yet realized. He was the greatest metaphysical genius whom the world has seen; and in him, more than in any other ancient thinker, the germs of future knowledge are contained. The sciences of logic and psychology, which have supplied so many instruments of thought to after-ages, are based upon the analyses of Socrates and Plato. The principles of definition, the law of contradiction, the fallacy of arguing in a circle,

the distinction between the essence and accidents of a thing or notion, between means and ends, between causes and conditions; also the division of the mind into the rational, concupiscent, and irascible elements, or of pleasures and desires into necessary and unnecessary-these and other great forms of thought are all of them to be found in the Republic, and were probably first invented by Plato.

In a world of rising tensions between Russia and the United States, the Middle East and Europe, Sunnis and Shiites, Islamism and liberalism,

Turkey is at the epicentre. And at the heart of Turkey is its right-wing populist president, Recep Tayyip Erdoğan. Since 2002, Erdoğan has consolidated his hold on domestic politics while using military and diplomatic means to solidify Turkey as a regional power. His crackdown has been brutal and consistent - scores of journalists arrested, academics officially banned from leaving the country, university deans fired and many of the highest-ranking military officers arrested. In some senses, the nefarious and failed 2016 coup has given Erdoğan the licence to make good on his repeated promise to bring order and stability under a 'strongman'. Here, leading Turkish expert Soner Cagaptay will look at Erdoğan's roots in Turkish history, what he

---

believes in and how he has cemented his rule, as well as what this means for the world. The book will also unpick the 'threats' Erdogan has worked to combat - from the liberal Turks to the Gulen movement, from coup plotters to Kurdish nationalists - all of which have culminated in the crisis of modern Turkey.

**Purging Your House, Pruning Your Family Tree** Charisma Media With our success in mapping the human genome, the possibility of altering our genetic futures has given rise to difficult ethical questions. Although opponents of genetic manipulation frequently raise the specter of eugenics, our contemporary debates about bioethics often take place in a historical vacuum. In fact, American religious leaders raised similarly challenging ethical questions in the first half of the twentieth century. Preaching Eugenics tells how Protestant, Catholic, and Jewish leaders confronted and, in many cases, enthusiastically embraced eugenics—a movement

that embodied progressive attitudes about modern science at the time. Christine Rosen argues that religious leaders pursued eugenics precisely when they moved away from traditional religious tenets. The liberals and modernists—those who challenged their churches to embrace modernity—became the eugenics movement's most enthusiastic supporters. Their participation played an important part in the success of the American eugenics movement. In the early twentieth century, leaders of churches and synagogues were forced to defend their faiths on many fronts. They faced new challenges from scientists and intellectuals; they struggled to adapt to the dramatic social changes wrought by immigration and urbanization; and they were often internally divided by doctrinal controversies among modernists, liberals, and fundamentalists. Rosen draws on previously unexplored archival

---

material from the records of the American Eugenics Society, religious and scientific books and periodicals of the day, and the personal papers of religious leaders such as Rev. John Haynes Holmes, Rev. Harry Emerson Fosdick, Rev. John M. Cooper, Rev. John A. Ryan, and biologists Charles Davenport and Ellsworth Huntington, to produce an intellectual history of these figures that is both lively and illuminating. The story of how religious leaders confronted one of the era's newest "sciences," eugenics, sheds important new light on a time much like our own, when religion and science are engaged in critical and sometimes bitter dialogue.

Aquaponics is the integration of aquaculture and soilless culture in a closed production system. This manual details aquaponics for small-scale production--predominantly for home use. It is divided into nine

chapters and seven annexes, with each chapter dedicated to an individual module of aquaponics. The target audience for this manual is agriculture extension agents, regional fisheries officers, non-governmental organizations, community organizers, government ministers, companies and singles worldwide. The intention is to bring a general understanding of aquaponics to people who previously may have only known about one aspect.
