**The Market for Aviation
Turboprop Engines**

The PW100 series turboprop engines comprise a three spool turbomachine (including a free turbine), and a reduction gearbox. For all models, the engine control is made via a single channel Electronic Engine Control (EEC) unit, with a hydro-mechanical back-up. 3.

Equipment

**PW100 Turboprop 3D Engine
Model**

The PW127H turboprop engine has two centrifugal impellers driven by independent axial turbines, a reverse flow annular combustor and a two-stage power turbine which provides the drive for the reduction gearbox.

The engine has two modules: a reduction gearbox module and a turbomachinery module. The modules are joined to form a rigid unit.

The PW100/PW150 engine family is the benchmark for low fuel consumption on routes of 350 miles or less. That means they consume 25% to 40% less fuel and produce up to 50% fewer CO2 emissions than

similar-sized regional jets. Our engines are also biofuel compatible.
