The Turbine Pilot's Flight Manual provides the only complete, understandable "how things work" explanation of turbine aircraft. It is intended for pilots graduating to more sophisticated aircraft and pilots wanting to review or learn the basics of turbine engine flight. It offers a complete description of turbine aircraft engines and systems, covering turboprops and jets; additional chapters on important related topics such as high-speed aerodynamics, multipilot crew coordination, wake turbulence, and high-altitude weather; coverage of "pure jet" operations, large aircraft systems, and other data needed by experienced pilots for review prior to recurrent, upgrade, or transition training; and explanations, intended for ex-military "jet jockeys," of civilian flight operations, aircraft, and systems as well as turboprop and multipilot operations and transition training.

John Schwaner of Sacramento Sky Ranch explains the piston aircraft engine with a practical day to day approach but directed towards the operator and repair personnel. Sky Ranch Engine Manual thoroughly covers the operation, inspection, and maintenance of the Lycoming and Continental piston aircraft engine, including a very comprehensive troubleshooting guide. This book goes beyond the basic theory of aircraft reciprocating engines but instead focuses on the practical aspects for mechanics and operators of why things go bad, how to repair them, and most important; how to keep them from failing in the first place.

The Gas-engine Handbook John Schwaner

The aim of this book with its detailed step-by-step colour photographs and diagrams, is to enable every owner to fix their diesel engine with ease. Troubleshooting tables help diagnose potential problems, and there is advice on regular maintenance and winterising and repair. Jean-Luc Pallas's enthusiasm for passing on his knowledge, as well as his clear explanations, precise advice and step-by-step instructions make this a unique book.
