USEF "S" and FEI 4* Dressage Judge Janet Foy issued an invitation to the dressage population: "Ask me your toughest dressage questions; ask me about the things about riding, training, and competing that you just don't understand; or, just ask me the questions you're always afraid to ask because you don't want to look like you don't know what you're doing!" The result was an outpouring of queries, from riders at every level, and from both those who just ride for fun as well as those who show. Foy has earned a dedicated following over many years teaching popular clinics alongside US Olympians Steffen Peters and Debbie McDonald, and her vast knowledge of the sport of dressage and trademark sense of humor propelled her first book Dressage for the Not-So-Perfect Horse to bestseller status. Now, for her eagerly awaited follow-up, she's responded to the hundreds of dressage questions she's received in an easy-to-engage-with Q-and-A format. Readers find no-nonsense answers to everything from understanding how horses learn the movements to really "getting" the importance of the outside rein to gaining coordination and achieving "throughness." As always, Foy's enthusiasm emanates from her words, and her drive to provide solid understanding is underscored by her insistence that riding dressage is, above all, fun.

In Provo, Utah, there exists the Foundation for Ancient Research and Mormon Studies (FARMS) renowned as a Mormon think-tank, FARMS is owned and operated by Brigham Young University (BYU) and the Mormon Church. Their mission seeks to repudiate the opposition, applaud its supporters, and justify many peculiar Mormon doctrines. This book demonstrates that FARMS often twists the truths to justify Mormon doctrines. To justify their position they often will utilize inane accusations, misquotes and equivocation. This collection of deceit from Mormon scholarship is what Matt Paulson has identified as the breaking of the Mormon Code.

CCDA 200-310 Official Cert Guide Juan Chamero
This book presents papers based on the presentations and discussions at the international workshop on Big Data Smart Transportation Analytics held July 16 and 17, 2016 at Tongji University in Shanghai and chaired by Professors Ukkusuri and Yang. The book is intended to explore a multidisciplinary perspective to big data science in urban transportation, motivated by three critical observations: The rapid advances in the observability of assets, platforms for matching supply and demand, thereby allowing sharing networks previously unimaginable. The nearly universal agreement that data from multiple sources, such as cell phones, social media, taxis and transit systems can allow an understanding of infrastructure systems that is critically important to both quality of life and successful economic competition at the global, national, regional, and local levels. There is presently a lack of unifying principles and methodologies that approach big data urban systems. The workshop brought together varied perspectives from engineering, computational scientists, state and central government, social scientists, physicists, and network science experts to develop a unifying set of research challenges and methodologies that are likely to impact infrastructure systems with a particular focus on transportation issues. The book deals with the emerging topic of data science for cities, a central topic in the last five years that is expected to become critical in academia, industry, and the government in the future. There is currently limited literature for researchers to know the opportunities and state of the art in this emerging area, so this book fills a gap by synthesizing the state of the art from various scholars and help identify new research directions for further study.
