C Tutorial - Learn C Programming with examples
This is a brief guide to to the fundamentals of building messaging applications using Qpid Proton C++. Proton provides an "event-driven" programming model, where you implement a subclass of proton::messaging_handler and override functions that react to various AMQP events (connections opening and closing, messages being delivered, and so on).. The examples below show how to implement handlers ...

CUDA C++ extends C++ by allowing the programmer to define C++ functions, called kernels, that, when called, are executed N times in parallel by N different CUDA threads, as opposed to only once like regular C++ functions.. A kernel is defined using the __global__ declaration specifier and the number of CUDA threads that execute that kernel for a given kernel call is specified using a new ...
