Yeast Genetics:

Methods and Protocols

is a collection of  
methods to best study  
and manipulate

Saccharomyces  
cerevisiae, a truly  
genetic powerhouse.

The simple nature of a  
single cell eukaryotic  
organism, the relative  
ease of manipulating its  
genome and the ability  
to interchangeably  
exist in both haploid  
and diploid states have  
always made it an  
attractive model  
organism. Genes can  
be deleted, mutated,  
engineered and tagged  
at will. Saccharomyces  
cerevisiae has played a

major role in the  
elucidation of multiple  
conserved cellular  
processes including  
MAP kinase signaling,  
splicing, transcription  
and many others.

Written in the  
successful Methods in  
Molecular Biology  
series format, chapters  
include introductions to  
their respective topics,  
lists of the necessary  
materials and reagents,  
step-by-step, readily

Cable is now as much in the broadband business as it is television. This book explains the fundamentals of coaxial cable technology and the DSP that controls it, along with the cable modem and voice over IP technology now drastically changing the cable operators' business.

Aimed at working engineers and technicians, it can also be used a textbook for the a basic cable communications course in a 2 year tech program.

The Zenith Trans-Oceanic Humana Press  
This second edition volume expands on the previous edition by presenting updated

protocols for several of the techniques described in the first edition of *Drosophila: Methods and Protocols* and current methods that cover recent breakthroughs in *Drosophila* research. The book begins with a description of FlyBase--a database of genes and genomes--followed by the presentation of systems for versatile gene expression in the fly. The first few chapters in this book detail gene knockdown and editing, including CRISPR-Cas9 and protein knockdown. The next few chapters are devoted to methods describing live imaging of different tissues and organs, followed by chapters on how to quantify image data and how to probe tissue mechanics by laser ablation. The next two

chapters provide methods for analyzing transcription followed by protocols to study growth, metabolism, ageing, and behavior in <i>Drosophila</i> . This volume concludes with chapters on electrophysiological recordings and methods to establish cell lines. Written in the highly successful <i>Methods in Molecular Biology</i> series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Cutting-edge and thorough, <i>Drosophila: Methods and Protocols, Second Edition</i> is a valuable source of hands-on protocols and reviews for molecular, cell, and	developmental biologists using <i>Drosophila</i> as model systems in their work. <u><i>Torpedo-directors</i></u> Elsevier This volume details experimental approaches used to investigate phagocytosis and phagosome maturation. Chapters present methods and protocols on quantifying uptake and phagosome maturation using biophysical and biochemical approaches, proteomics, microscopy, and flow cytometry. Container loads are loads that are rigged for airdrop in airdrop containers such as the A-7A cargo sling, the A-21 cargo bag, and the A-22 cargo bag. In addition, flat steel strapping is used to rig container loads. The containers are packed with supplies, disassembled equipment, or small items of ready-to-use equipment

prepared for airdrop. The container load requires cushioning material such as honeycomb, felt, or cellulose wadding, depending on the load requirements and the method of airdrop. The number and types of parachutes required to stabilize and retard the descent of the load depends on the type of container used, the weight of the load, and the type of airdrop.

The previously untold story of the Zenith Trans-Oceanic, the world's most romantic and expensive series of portable radios. Long a companion of kings, presidents, transoceanic yachtsmen and world explorers, the Trans-Oceanic was also carried into battle by American troops in three wars. Its great popularity in spite of a very high price can be

laid at the feet of several generations of armchair travelers who used the shortwave capabilities of the Trans-Oceanic as a window on the world. With access to the Zenith corporate archives and their long experience as radio enthusiasts and writers for both the popular and scholarly press, Professors Bryant and Cones present the engrossing stories of the development and use of the Trans-Oceanic throughout its forty year life. They present a wealth of never-before published photographs, documents and information concerning these fascinating radios, their collection, preservation and restoration.

NEW YORK TIMES  
BESTSELLER • “ A fascinating look at how consumers perceive logos, ads, commercials, brands, and products. ” —Time How much do we know about why we buy? What truly influences our decisions in today ' s message-cluttered world? In Buyology, Martin Lindstrom presents the astonishing findings from his groundbreaking three-year, seven-million-dollar neuromarketing study—a cutting-edge experiment that peered inside the brains of 2,000 volunteers from all around the world as they encountered various ads, logos, commercials,

brands, and products. His startling results shatter much of what we have long believed about what captures our interest—and drives us to buy. Among the questions he explores:

- Does sex actually sell?
- Does subliminal advertising still surround us?
- Can “cool” brands trigger our mating instincts?
- Can our other senses—smell, touch, and sound—be aroused when we see a product?

Buyology is a fascinating and shocking journey into the mind of today's consumer that will captivate anyone who's been seduced—or turned off—by marketers' relentless attempts to win our loyalty, our money, and our minds.
