### The QUADRATIC EQUATIONS AND FUNCTIONS

WORKBOOK is a resource that Algebra 2 students can use to practice solving quadratic equations, writing quadratic equations, graphing quadratic functions, writing quadratic functions, and solving word problems that involve quadratic equations and functions. There are nine sections in this workbook. Example problems with step-by-step solutions precede each type of problem for sections one through nine. Students should study these examples before starting the problems. This workbook also contains the step-by-step solutions for all problems. Section 1 begins with problems for students to use square roots to solve quadratic equations in simplest terms. The denominator for answers is rationalized. In Section 2, students solve quadratic equations by factoring and by using the Zero Product Property. Section 3 includes problems where students solve quadratic equations by completing the square. This workbook contains the derivation of the Quadratic Formula. In Section 4, students use

the Quadratic Formula to solve quadratic equations. This workbook includes the derivation of the sum and product of roots for a quadratic equation in standard form. Section 5 is where students write quadratic equations given their roots. Students can use the Zero Product Property or the sum and product of its roots to do these problems. In Section 6, students explain why the graph of the quadratic function, which is called a Parabola, will open upward or downward. Then they determine if the graph will have a minimum or a maximum. Section 7 is where students graph quadratic functions that are in standard, factored, and vertex form. In Section 8, students use the coordinates for points on the graph of a quadratic function to write the quadratic function in factored, vertex, and standard form. Section 9 is where students solve word problems that involve quadratic equations and quadratic functions. Finally, there are step-by-step solutions for all problems.

enlightened approach grounded in the fundamentals of classroom experience in Beginning and Intermediate Algebra. The text reflects the compassion and insight of its experienced author with features developed to address the specific needs of developmental level students. Throughout the text, the author communicates to students the very points their instructors are likely to make during lecture, and this helps to reinforce the concepts and provide instruction that leads students to mastery and success. The exercises, along with the number of practice problems and group activities available, permit instructors to choose from a wealth of problems, allowing ample opportunity for students to practice what they learn in lecture to hone their skills. In this way, the book perfectly complements any learning platform, whether traditional lecture or distance-learning; its instruction is so reflective of what comes from lecture, that students will feel as comfortable outside of class as they do inside class with their instructor.

Intermediate Algebra: A Text/Workbook, Second Edition focuses on the principles, operations, and approaches involved in intermediate

algebra. The publication first takes a look at basic properties and definitions, first-degree equations and inequalities, and exponents and polynomials. Discussions focus on properties of exponents, polynomials, sums, and differences, multiplication of polynomials, inequalities involving absolute value, word problems, first-degree inequalities, real numbers, opposites, reciprocals, and absolute value, and addition and subtraction of real numbers. The text then examines rational expressions, quadratic equations, and rational expressions and roots. Topics include completing the square, quadratic formula, multiplication and division of radical expressions, equations with radicals, basic properties and reducing to lowest terms, and addition and subtraction of rational expression. The book takes a look at logarithms, relations and functions, conic sections, and systems of linear equations, including introduction to determinants, systems of linear equations in three variables, ellipses and hyperbolas, nonlinear systems, function notation, inverse of a function, and exponential equations and change of base. The publication is a valuable reference for students and researchers interested in intermediate algebra.
