Chemistry: Inorganic Qualitative Analysis in the Laboratory is a textbook dealing with qualitative analysis in the laboratory, as well as with the process of anion and cation analysis. The book presents an overview of the subject of inorganic qualitative analysis, including as the equipment, reagents, and procedures that are going to be used in the laboratory. Preliminary experiments include the classification of precipitates, handling precipitates, separation techniques, flame tests, Brown ring test, solvent extraction. The text also describes in detail how to prepare the experiment for anion and cation analysis such as testing for water solubility in a solid sample or the sodium carbonate treatment of a water-soluble sample. The book also explains the qualitative analysis for anions in preliminary and specific tests. In the qualitative analysis for cations, the student follows different procedures for Cation Groups I, II, III, IV or V. For example, the ions of Cation Group V cannot be precipitated by any Cation Groups I-IV reagents, nor by any single group reagent. The textbook is suitable for both chemistry teachers and freshmen students.

Research Methods for Nursing and Healthcare is an essential introductory text for all nursing and healthcare students coming to research methods for the first time or those nurses and healthcare staff wishing to improve their skills in this area. The book includes comprehensive coverage of the main research methods topics, and provides guidance on how to understand and apply research techniques. Everyday nursing examples are used throughout to explain research methods concepts and their relevance to practice. Simple self-assessment tasks are included at the end of chapters; the tests can be undertaken individually, or within groups, to assess the student's understanding of the concepts and skills being learnt. Research Methods for Nursing and Healthcare takes the fear out of research methods for all nursing and healthcare professionals. Excellent introductory text that brings interest to research methods for student nurses. Dr Aimee Aubeeluck, Deputy Director: Graduate Entry Nursing, School of Nursing, Midwifery and Physiotherapy University of Nottingham "I think this is one of the most readable books on research I have read. Not the most scholarly, but that was not the intention. It is certainly the most user friendly book that will make the whole, often scary, subject of research less threatening." Paula Crick, Principal Lecturer, Faculty of Health, Staffordshire University "I do think this is one of the most engaging texts aimed at nursing that I have read in a while... This does seem much more exciting and more importantly. 'real world'" Lucy Land, Senior Academic, Centre for Health and Social Care Research Faculty of Health Birmingham City University "Useful resource for our students dissertation which can be a literature review or a research proposal" Melanie Brooke-Read, Department of Health & Social Studies, University of Bedfordshire "Excellent text book which actually takes away the 'fear' of research within healthcare" Angela Cobbold, Institute of Health & Social Care, Anglia Ruskin University "The text is very comprehensive and I found chapter 7 on action research particularly useful in supporting a student I was supervising. I also like the self assessment exercises which I intend to incorporate in my teaching strategy." Ms. Mulcahy, School of Nursing and Midwifery, University College Cork.

"Reporting standards are guidelines that describe how to communicate findings clearly in journal articles so that readers can access and understand the story of the research endeavor. Recognizing that reporting standards can aid authors in the process of writing and evaluating manuscripts and editors and reviewers in the process of evaluating those manuscripts, the Publications and Communications (P&C) Board of the American Psychological Association (APA) invited two task forces of researchers to develop standards for reporting quantitative and qualitative research in journal articles. The Quantitative Journal Article Reporting Standards Working Group developed standards for quantitative research, and a separate book details those standards. This book discusses the reporting standards. It permits the space to expand on the ideas in those standards and to articulate the rationale behind each. It articulates decisions one may need to make as an author as one decides how to present their work. It also provides examples to illustrate a strong presentation style, and these can serve as helpful models. It provides the conceptual undergirding for the reporting decisions that authors make during the writing process. The book considers the typical sections of a qualitative research paper: the introductory sections, Method, Results, and Discussion. Guidance is provided for how to best present qualitative research, with rationales and illustrations. The book presents reporting standards for qualitative meta-analyses, which are integrative analyses of findings from across primary qualitative research. The book includes a discussion of objectivist and constructivist rhetorical styles in research reporting."--Preface. (PsycINFO Database Record (c) 2020 APA, all rights reserved).

"Students in qualitative classes often have a difficult time grasping abstract concepts related to data collection, coding, and analysis. One benefit of [this book] is the systematic manner in which all of these take place. This text does a nice job of creating a system of checks and balances for the qualitative researcher" - Justin M Laird, SUNY Brockport Aimed at helping students unscramble the mysteries of qualitative data collection, coding, and analysis, this book integrates and reconciles theory and methods by showing how to use a systematic, qualitative technique: interactive qualitative analysis.
