This important new manual goes beyond the published NFPA standards on installation of standpipe systems to include the rules in the International Building Code, municipal fire codes, the National Fire Code of Canada, and information on inspection, testing, and maintenance of standpipe systems. Also covered are the interactions between standpipe and sprinkler systems, since these important fire protection systems are so frequently installed together. Illustrated with design examples and practical applications to reinforce the learning experience, this is the go-to reference for engineers, architects, design technicians, building inspectors, fire inspectors, and anyone that inspects, tests or maintains fire protection systems. Fire marshals and plan review authorities that have the responsibility for reviewing and accepting plans and hydraulic calculations for standpipe systems are also an important audience, as are firefighters who actually use standpipe systems. As a member of the committees responsible for some of these documents, Isman also covers the rules of these standards and codes as they are written, but also provides valuable insight as to the intent behind the rules. A noted author and lecturer, Professor Isman was an engineer with the National Fire Sprinkler Association (NFSA), is an elected Fellow of the Society of Fire Protection Engineers (SFPE), and currently Clinical Professor in the Department of Fire Protection Engineering at University of Maryland. /div

Nominative-accusative and ergative are two common alignment types found across languages. In the former type, the subject of an intransitive verb and the subject of a transitive verb are expressed the same way, and differently from the object of a transitive. In ergative languages, the subject of an intransitive and the object of a transitive appear in the same form, the absolutive, and the transitive subject has a special, ergative, form. Ergative languages often follow very different patterns, thus evading a uniform description and analysis. A simple explanation for that has to do with the idea that ergative languages, much as their nominative-accusative counterparts, do not form a uniform class. In this book, Maria Polinsky argues that ergative languages instantiate two main types, the one where the ergative subject is a prepositional phrase (PP-ergatives) and the one with a noun-phrase ergative. Each type is internally consistent and is characterized by a set of well-defined properties. The book begins with an analysis of syntactic ergativity, which as Polinsky argues, is a manifestation of the PP-ergative type. Polinsky discusses diagnostic properties that define PPs in general and then goes to show that a subset of ergative expressions fit the profile of PPs. Several alternative analyses have been proposed to account for syntactic ergativity; the book presents and outlines these analyses and offers further considerations in support of the PP-ergativity approach. The book then discusses the second type, DP-ergative languages, and traces the diachronic connection between the two types. The book includes two chapters illustrating paradigm PP-ergative and DP-ergative languages: Tongan and Tsez. The data used in these descriptions come from Polinsky's original fieldwork hence presenting new empirical facts from both languages.

Creating a powerful and impactful survey is no easy feat; even experienced survey researchers struggle to eliminate bias and create robust questionnaire designs. Through case studies, real-life examples, and multiple data visualization graphics, Conducting Survey Research offers a unique how to guide on creating a survey. Throughout its seven chapters, the text enables readers to build relevant, unbiased, and purposeful survey questions. The text highlights common mistakes in survey research (e.g., using the appropriate sample size and survey administration mode), and demonstrates how to interpret survey data and report findings. While numerous online survey platforms exist, the text reviews features of some of the most popular ones to help readers decide which best meet their needs. The world of survey research is extensive. While this text offers a great introduction to the survey research world, it only covers the tip of the iceberg. For those interested in delving deeper into the topic, JAF Associates offers onsite, on-demand, instructor-led, and self-paced learning modules covering the content of this text, and more.

An essential guide for developing and interpreting piping and instrumentation drawings Piping and Instrumentation Diagram Development is an important resource that offers the fundamental information needed for designers of process plants as well as a guide for other interested professionals. The author offers a proven, systemic approach to present the concepts of P&ID development which previously were deemed to be graspable only during practicing and not through training. This comprehensive text offers the information needed in order to create P&ID for a variety of chemical industries such as: oil and gas

industries; water and wastewater treatment industries; and food industries. The author outlines the basic development rules of piping and instrumentation diagram (P&ID) and describes in detail the three main components of a process plant: equipment and other process items, control system, and utility system. Each step of the way, the text explores the skills needed to excel at P&ID, includes a wealth of illustrative examples, and describes the most effective practices. This vital resource: Offers a comprehensive resource that outlines a step-by-step guide for developing piping and instrumentation diagrams Includes helpful learning objectives and problem sets that are based on real-life examples Provides a wide range of original engineering flow drawing (P&ID) samples Includes PDF 's that contain notes explaining the reason for each piece on a P&ID and additional samples to help the reader create their own P&IDs Written for chemical engineers, mechanical engineers and other technical practitioners, Piping and Instrumentation Diagram Development reveals the fundamental steps needed for creating accurate blueprints that are the key elements for the design, operation, and maintenance of process industries.
