The Arms Race in Asia Stanford University Press

This book provides the first comprehensive analyses of the challenges all European welfare systems have been facing since 2007, combining in-depth country-based studies and comparative chapters. It focuses on: 1) the economic and financial crisis, 2) demographic change, and 3) the balance between avoiding risks and opening up opportunities in social policy. The results show that European welfare systems tend to face the same challenges in different ways and that also their responses to those challenges differ considerably. Although the EU also plays a part in shaping national welfare systems, it becomes evident that European welfare systems are by no means converging: in terms of social policy, national diversity within Europe is still a major factor that will shape future developments in European welfare systems.

As economic crises, growing inequality and climate change prompt a global debate on the meaning and trajectory of development, increasing attention is focusing on 'social and solidarity economy' as a distinctive approach to sustainable and rights-based development. While we are beginning to understand

what social and solidarity economy is, what it promises and how it differs from 'business as usual', we know far less about whether it can really move beyond its fringe status in many countries and regions. Under what conditions can social and solidarity economy scale up and scale out - that is, expand in terms of the growth of social and solidarity economy organizations and enterprises, or spread horizontally within given territories? Bringing together leading researchers, blending theoretical and empirical analysis, and drawing on experiences and case studies from multiple countries and regions, this volume addresses these questions. In so doing, it aims to inform a broad constituency of development actors, including scholars, practitioners, activists and policy makers.

What do we really know about immigration? Immigration is one of the most controversial issues these days. Keeping them out. Taking back control. Building that wall. Whether the debate centres on economics or identity, it is often framed as 'Them' (bad immigrants) against 'Us' (good locals). But immigrants aren't a burden or a threat – and if we make the right choices we all can thrive together. Drawing on first-hand reporting, compelling stories and the latest research and evidence from around the world, Philippe Legrain explains how immigration benefits us all in many ways. Immigrants start new businesses, bring different skills and help spark valuable new ideas. They help save lives – including Boris Johnson's. As key workers, they keep coronavirus-stricken societies going, while young newcomers care – and help pay – for our ageing population. For sure, learning to live together can be tough. The book also addresses tricky issues such as 'illegal' immigration, what immigration entails for national identity, what newcomers need to do to fit in, and how societies ought to adapt. And it suggests new ideas for how to persuade moderate sceptics about the merits of immigration. If patriotism means wanting the best for your country, we should be welcoming immigrants with open arms. It is time

to close the gap between myth and reality – and, in the process, close the gap between ‘ Them ’ and ‘ Us ’ .

The European Neighbourhood Policy (ENP) has evolved into one of the European Union's major foreign policy instruments and received considerable attention. However, other EU neighbourhood policies, and their relevance for the ENP, also require examination. The Arab uprisings, civil wars in Libya and Syria, the continuing Israeli-Palestinian conflict, the crisis in Ukraine and Russia's annexation of the Crimean peninsula have all brought the institutional design and tools of the ENP into question and a comparative perspective is crucial to understand EU neighbourhood policies in a wider sense. This timely book puts the ENP into context by exploring the major challenges and key lessons of the EU's other policy frameworks with neighbouring countries. Mapping the EU's bi-lateral and multilateral neighbourhood relations in comparison to the ENP and investigating the major challenges faced, it provides a comprehensive, up-to-date view of the EU's relations with its neighbours. Focusing on current affairs and future challenges, the comparison with the ENP and the lessons to be drawn, generate novel insights into the EU's closest external relations. This book will be of key interest to students and scholars studying European Politics, policies and comparative politics.

The overarching contribution of this book is a review and assessment of the current and future impacts of globalization on the world's forests. The work has been developed by the "Resources for the Future" Task Force for the International Union of Forest Research Organizations (IUFRO). Four key themes are addressed: the effect of globalization on forests (including future trade flows); plantations as the primary source of forest products and its consequences, including plant breeding and forest health; the effect of new products such as bio-products and markets on forests; and the emergence of forest ecosystem services and their impact on the landscape and human communities. These four themes are examined in detail to map out the impacts of these trends for forests throughout the world and at multiple scales, and how forest research needs to be adapted to address these trends. Overall, the volume provides a major synthesis of current thinking and knowledge on the

topic for advanced students, as well as policy-makers and professionals in the forest sector.

A World Without Work Springer

Credit rating agencies play an essential role in the modern financial system and are relied on by creditors and investors on the market. In the recent financial crisis, their power and reliability were often questioned, yet a simple rating downgrade could threaten to bankrupt a whole country. This book examines the governance of credit rating agencies, as expressed by their ability to fairly, ethically and consistently assign higher rates to issuers having lesser default risks. However, factors such as the drive for increased revenue and market share, the inadequate business model, the inadequate methodology of assessing risk, opacity and inadequate internal monitoring have all been identified as critical governance failures for credit agencies.

This book explores these issues, and proposes some potential solutions and improvements. This will be of interest to researchers and advanced students of corporate finance, finance, financial economics, risk management, investment management, and banking.

Economic crime is a significant feature of the UK's economic landscape and yet despite the government's bold mission statements 'to hold those suspected of financial wrongdoing to account' as part of their 'day of reckoning' and 'serious about white-collar crime' agenda, there is a sense that this is still not being done effectively. This book examines the history of the creation of the UK's anti-economic crime institutions and accompanying legislation, providing a critique of their effectiveness. The book analyses whether the recent regulatory regime is fit for purpose as well as being appropriate for the future. In order to explore how the UK's economic crime strategies could be improved the book takes a comparative approach analysing policy and legislative responses to economic crime in the United States and Australia in order to determine whether the UK could or should import similar structures or laws to improve the enforcement of UK economic crime.

Aftershock CRC Press

The consequences of the global economic crisis which started in the United States in 2007-08 are still being felt in most of the

advanced economies, and the mainstream tools of recovery are not having the required results. It seems that many of the after-effects of the crisis, including the instability of the financial markets, increasing public debts and limited economic growth, require new solutions from both economic policy and theory. Lower aggregate demand during the crisis increased the pressure on firms to be more competitive and at the same time, the crisis in the banking system has had a negative impact on the willingness of financial institutions to give credit to companies for investment. Therefore, the key issue for current economic policy is to find a balance between the stabilisation of public finance and maintaining the momentum of long-term growth. This book offers an evolutionary-developmental analysis, combining elements of neo-Schumpeterian economics, institutional economics and post-Keynesian economics, to show that selection processes within an economy, and the institutional rules shaping those processes, are substantially more important than usually recognised by evolutionary economic theory. Two major challenges for economic theory and policy, in particular, have emerged during the crisis. The first is the rise of unemployment coupled with growing public deficits. The second is the financial instability which threatens the permanence of economic development. This book examines the performance of the advanced economies since the crisis and explores why some of them have been more successful in tackling these challenges than others. It is argued that the reasons for the varied performances of these economies lie in the economic policies which were introduced before and in the aftermath of the crisis and the differences in the regulation of their labour markets. This volume will be of interest to students and academics in the areas of macroeconomics, public economics and public management.
