This book is a cross-linguistic study of the syntax of yes-no questions and their answers, drawing on data from a wide range

of languages with particular focus on English, Finnish, Swedish, Thai, and Chinese. There are broadly two types of answer to yes-no questions: those that employ particles such as 'yes' and 'no' (as found in English) and those that echo a part of the question, usually the finite verb, with or without negation (as found in Finnish). The latter are uncontroversially derived by ellipsis, while the former have been claimed to be clause substitutes. Anders Holmberg argues instead that even answers that employ particles are complete sentences, derived by ellipsis from full sentential expressions, and that the two types share essential syntactic properties. The book also examines the related cross-linguistic and intralinguistic variation observed in answers to negative questions such as 'does he not drink coffee?', whereby 'yes' in one language appears to correspond to 'no' in another. The book illustrates how a seemingly trivial phenomenon can have the most wide-ranging consequences for theories of language, and will be of interest not only to theoretical linguists but also to students and scholars of typological and descriptive linguistics.

Exploring the complex arena of international planning for development has until now been uniquely the privilege of influential senior western planners. This book calls into question many of their hallowed principles and much of the conventional wisdom still evident in the halls of academe. At a time of increasing enrollment of foreign students in North

American planning programs, the emergence of a new voice has coincided with a growing skepticism, worldwide, about old notions of planning and development in poorer and ex-colonial countries. Now there is a need for brave innovations to reshape our understanding of the global crisis and the potential for progressive and democratic local solutions in both rich and poor nations alike. This new voice is given expression by academics and professionals from Third World nations who received their planning education in the west and who now hold posts in major western planning schools. Breaking the Boundaries presents their views, and those of concerned colleagues, about the need for a radically changed curriculum based on a comparative, one-

world approach to planning education. Their study package contains all the resources, personal experiences as young expatriate scholars, and later as teachers of both Third World and First World students in western planning schools are seen as crucial to this need for change. Through candid reflections and perceptive critiques of their own field- the spatial, environmental, social, design and communications disciplines - the contributors explore crucial issues in development planning from theoretical and professional practice perspectives.

What if you could unlock a better answer to your most vexing problem—in your workplace, community, or home life—just by changing the question? Talk to creative problem-solvers and

they will often tell you, the key to their success is asking a different question. Take Debbie Sterling, the social entrepreneur who created GoldieBlox. The idea came when a friend complained about too few women in engineering and Sterling wondered aloud: "why are all the great building toys made for boys?" Or consider Nobel laureate Richard Thaler, who asked: "would it change economic theory if we stopped pretending people were rational?" Or listen to Jeff Bezos whose relentless approach to problem solving has fueled Amazon's exponential growth: "Getting the right question is key to getting the right answer." Great questions like these have a catalytic quality—that is, they dissolve barriers to creative thinking and channel the pursuit of solutions into new, accelerated pathways. Often, the moment they are voiced, they have the paradoxical effect of being utterly surprising yet instantly obvious. For innovation and leadership guru Hal Gregersen, the power of questions has always been clear—but it took some years for the follow-on question to hit him: If so much depends on fresh questions, shouldn't we know more about how to arrive at them? That sent him on a research quest ultimately including over two hundred interviews with creative thinkers. Questions Are the Answer delivers the insights Gregersen gained about the conditions that give rise to catalytic questions—and breakthrough insights—and how anyone can create them.
