Promoting Active Learning through the Flipped Classroom Model Pearson Higher Ed
For introductory courses in Microsoft(R) Office. Seamless digital instruction, practice, and assessment For over 17 years, instructors have relied upon the GO! series to teach Microsoft Office successfully. The series uses a project-based approach that clusters learning objectives around projects, rather than software features, so students can practice solving real business problems. Gaskin uses easy-to-follow Microsoft Procedural Syntax so students always know where to go on the ribbon; she combines this with a Teachable Moment approach that offers learners tips and instructions at the precise moment they're needed. Updated to Office 365, GO! with Microsoft(R) Office 365(R), 2019 Edition, Getting Started adds tips for Mac users, revised instructional projects, and improved coverage of the what, why, and how of skills application. Also available with MyLab IT By combining trusted author content with digital tools and a flexible platform, MyLab personalizes the learning experience and improves results for each student. MyLab IT 2019 delivers trusted content and resources through an expansive course materials library, including new

easy-to-use Prebuilt Learning Modules that promote student success. This book offers full, comprehensive coverage of Microsoft Excel. Beyond point-and-click The goal of the Exploring series is to move students beyond the point-and-click, to understanding the why and how behind each skill. And because so much learning takes place outside of the classroom, this series provides learning tools that students can access anywhere, anytime. Students go to college now with a different set of skills than they did years ago. With this in mind, the Exploring series seeks to move students beyond the basics of the software at a faster pace, without sacrificing coverage of the fundamental skills that everyone needs to know. Also available with MyITLab MyITLab ® is an online homework, tutorial, and assessment program designed for Information Technology (IT) courses, which engages students and improves results. HTML5 Simulation exercises and Live-in-Application Grader projects come with the convenience of auto-grading and instant feedback, helping students learn more quickly and effectively. Digital badges lets students showcase their Microsoft Office or Computer Concepts competencies, keeping them motivated and focused on their future careers. Introduction to Java Programming Pearson

"Intended as an upper-level undergraduate or introductory graduate text in computer science theory," this book lucidly covers the key concepts and theorems of the theory of computation. The presentation is remarkably clear; for example, the "proof idea," which offers the reader an intuitive feel for how the proof was constructed, accompanies many of the theorems and a proof.

Introduction to the Theory of Computation covers the usual topics for this type of text plus it features a solid section on complexity theory--including an entire chapter on space complexity. The final chapter introduces more advanced topics, such as the discussion of complexity classes associated with probabilistic algorithms.

A clear and student-friendly introduction to the fundamentals of Python In Starting Out with Python®, 4th Edition, Tony Gaddis' accessible coverage introduces students to the basics of programming in a high level language. Python, an easy-to-learn and increasingly popular object-oriented language, allows readers to become comfortable with the fundamentals of programming without the troublesome syntax that can be challenging for novices. With the knowledge acquired using Python, students gain confidence in their skills and learn to recognize the logic behind developing high-quality programs. Starting Out with Python discusses control structures, functions, arrays, and pointers before objects and classes. As with all Gaddis texts, clear and easy-to-read code listings, concise and practical real-world examples, focused explanations, and an abundance of exercises appear in every chapter. Updates to the 4th Edition include revised, improved problems throughout, and new Turtle Graphics sections that provide flexibility as assignable, optional material. Personalize learning with MyLab Programming. MyLab(tm) Programming is an online learning system designed to engage students and improve results. MyLab Programming consists of programming exercises correlated to the concepts and objectives in this book. The performance of software systems is dramatically affected by how well software designers understand the basic hardware technologies at work in a system. Similarly, hardware designers must understand the far-reaching effects their design decisions have on software applications. For readers in either category, this classic introduction to the field provides a look deep into the computer. It demonstrates the relationships between the software and hardware and focuses on the foundational concepts that are the basis for current computer design.

It is widely agreed throughout the world that education and access to education are human rights. In order to accommodate the educational needs of people globally, technology will be required that supports inclusion and promotes equity for both learning processes and governance in educational institutions. In order to achieve this, technological resources must be designed to be accessible and usable for all individuals by implementing user-centered design (UCD) and user experience design (UXD) processes. UXD and UCD Approaches for Accessible Education is an academic research publication that explores thoughts and experiences on accessible and equitable education from perspectives on human-computer interaction, user research, and design thinking. It seeks to improve the understanding on how technology should be designed to truly contribute to and support accessibility and equity in education. Featuring a wide range of topics such as online courses, inclusive education, and virtual reality, this publication is essential for academicians, curriculum designers, researchers, instructional designers, educational software developers, IT consultants, policymakers, administrators, and students.

This book presents Proceedings of the 2021 Intelligent Systems Conference which is a remarkable collection of chapters covering a wider range of topics in areas of intelligent systems and artificial intelligence and their applications to the real world. The conference attracted a total of 496 submissions from many academic pioneering researchers, scientists, industrial engineers, and students from all around the world. These submissions underwent a double-blind peer-review process. Of the total submissions, 180 submissions have been selected to be included in these proceedings. As we witness exponential growth of computational intelligence in several directions and use of intelligent systems in everyday applications, this book is an ideal resource for reporting latest

innovations and future of AI. The chapters include theory and application on all aspects of artificial intelligence, from classical to intelligent scope. We hope that readers find the book interesting and valuable; it provides the state-of-the-art intelligent methods and techniques for solving real-world problems along with a vision of the future research.
