The girl, Nya, is fetching water from a pond that is two hours' walk from her home: she makes two trips to the pond every day. The boy, Salva, becomes one of the "lost boys" of Sudan, refugees who cover the African continent on foot as they search for their families and for a safe place to stay. unique way to explore primates' adaptive diversity in the context of how evolution works. The book encourages students to study primates as integrated members of regional communities, ecologically, historically, and evolutionarily. The chapters are organized to emphasize the patterns of primate radiations in the four regions of the world where primates live, and to facilitate comparisons among the radiations. The overviews of communities illustrate how the ecological adaptations of different species and taxonomic or phylogenetic groups enable them to coexist. Illustrations and tools to aid students' learning include case studies, photographs, figures, tables, charts, key concepts, and quizlets to self-test. This book is an ideal introduction for students studying nonhuman primates, primatology, primate behavior, or primate ecology.
