 Now available in paper for the first time, this volume brings together leading contributors to provide a comprehensive review of theory, research, and practice in child and adolescent personality assessment. Organized for easy reference, the book is divided into four parts. Part I summarizes basic theories, issues, and concepts, setting forth a framework for assessment as a hypothesis-generating, problem-solving process. Part II describes and evaluates a wide range of relevant approaches, tests, and techniques, marshaling the available data and reviewing administration procedures, scoring, and interpretation. In Part III, the process by which personality assessment is translated into effective intervention strategies and programs for children is examined in depth. A summary of major perspectives and recommended practices is presented in Part IV, which also considers future needs and directions for the field.
Comprehensive Handbook of Psychological Assessment, Volume 2 John Wiley & Sons
 Disturbed children constitute a sizeable and varied percentage of the child population. Generally, two to three percent have severe, longstanding problems and 20 to 30 percent have current, more transient problems. While preventive efforts are needed, it also seems obvious that many children will continue to function in a disturbed and disturbing fashion and will continue to require various kinds of therapeutic interventions. These interventions will mainly occur in school and community settings. This book attempts to present a picture of some fairly popular models of intervention and to consider important related issues. There are probably as many ways of coping with disturbed children as there are creative, caring persons attempting to do the coping. A growing literature exists on ways of conceptualizing and intervening with such children. It was believed by the editor that an organized body of information on these concepts and techniques would prove useful to student and practitioner. A danger with such collections is that if they mainly portray novel or atypical techniques, while informative, the book quickly becomes passe and of limited value. This book's focus is on contemporary thought, but also on orientations that have stood the test of some time and the stability of the underlying theory.

 Introductory texts on psychological testing and evaluation historically are not in short supply. Typically, however, such texts have been relatively superficial in their discussion of clinical material and have focused primarily on the theoretical and psychometric properties of individual tests. More practical, clinically relevant presentations of psychological instruments have been confined to individual volumes with advanced and often very technical information geared to the more sophisticated user. Professors in introductory graduate courses are often forced to adopt several advanced texts to cover the material, at the same time helping students wade through unnecessary technical information in order to provide a basic working knowledge of each test. Understanding Psychological Assessment is an attempt to address these concerns. It brings together into a single volume a broad sampling of the most respected instruments in the psychologist's armamentarium along with promising new tests of cognitive, vocational, and personality functioning. Additionally, it presents the most updated versions of these tests, all in a

practical, clearly written format that covers the development, psychometrics, administrative considerations, and interpretive hypotheses for each instrument. Clinical case studies allow the reader to apply the interpretive guidelines to real clinical data, thereby reinforcing basic understanding of the instrument and helping to insure that both the student and practitioner can actually begin to use the test. Understanding Psychological Assessment includes cognitive and personality tests for adults, children, and adolescents, as well as chapters on the theory of psychological measurement and integrated report writing.

 In this volume, Kathleen Nader has compiled an articulate and comprehensive guide to the complex process of assessment in youth and adolescent trauma. There are many issues that are important to evaluating children and adolescents, and it is increasingly clear that reliance on just one type of assessment does not provide the most accurate results. From history to recent advances, this book covers a wide range of methods and measures for assessing trauma, including case examples to illustrate the integration of these different facets. Altogether, the broad scope and inclusive depth of this work make it an essential addition to the field of trauma assessment.
Handbook of Psychology, History of Psychology Routledge
 For centuries the "treatment" of mentally disturbed individuals was quite simple. They were accused of collusion with evil spirits, hunted, and persecuted. The last "witch" was killed as late as 1782 in Switzerland. Mentally disturbed people did not fare much better even when the witchhunting days were gone. John Christian Reil gave the following description of mental patients at the crossroads of the fifteenth and sixteenth centuries: We incarcerate these miserable creatures as if they were criminals in abandoned jails, near to the lairs of owls in barren canyons beyond the city gates, or in damp dungeons of prisons, where never a pitying look of a humanitarian penetrates; and we let them, in chains, rot in their own excrement. Their fetters have eaten off the flesh of

their bones, and their emaciated pale faces look expectantly toward the graves which will end their misery and cover up our shamefulness. (1803) The great reforms introduced by Philippe Pinel at Bicetre in 1793 augured the beginning of a new approach. Pinel ascribed the "sick role," and called for compassion and help. One does not need to know much about those he wants to hurt, but one must know a lot in order to help. Pinel's reform was followed by a rapid development in research of causes, symptoms, and remedies of mental disorders. There are two main prerequisites for planning a treatment strategy.
