PRODUCT DESCRIPTION This study guide provides one tool for the preparation and study for the CIP examination. It is a companion book to the CIP Exam Workbook. The sequence of chapters in the study guide follows the same sequence as in the CIP exam workbook and the flow of ideas in each chapter is concordant with the sequence of questions in the workbook. It is recommended that the two books be studied together for

the most effective exam preparation. The study guide is organized in distinct chapters each of which covers one aspect of the regulations or guidances. The study material is designed to instruct on core information relevant to the examination. However it is hoped that the study guide can also function as an IRB Handbook. The study guide is therefore designed not only to prepare for the CIP examination but also to educate IRB professionals and Clinical Research Coordinators on matters which arise frequently in IRB administration. The Institutional Review Board (IRB) is responsible for the review of a wide variety of clinical research. As the complexity of clinical research has grown over the years, the duties and responsibilities of the IRB have grown increasingly complex. This complex environment demands that the IRB be staffed and managed by professionals. As a part of affirming the professionalism of IRB staff, administrators and directors the Public Responsibility in Research and Medicine (PRIM&R) provides an important forum for education and affirmation of ethical standards for the performance and management of clinical research. An important component of this program is the certification exam known as the CIP (Certified IRB Professional). This examination which is offered twice a year covers a wide range of regulatory topics. The book addresses the key issues in federal regulations outlined in statutes including Title 45 part 4 (Protection of Human Subjects) , Title 21 part 50 (Protection of Human Subjects), Title 21 part 56 (Institutional review Boards) Title 21 part 54 (Financial Disclosures by Clinical Investigators) . Also addressed are key FDA statutes involved in the regulation of clinical trials Title 21 part 312 (Investigational New Drug Application), Title 21 part 812 (Investigational Device Exemptions) and Title 21 part 11 (Electronic Records and Electronic Signatures). The CIP exam covers material based not only on these regulations but also on guidances issued by OHRP and the FDA. Special attention has been devoted to material covered in these guidances. Also addressed are

interactions of the IRB with other committees in the institutional environment.

Turn Uncomfortable Conversations into Meaningful Dialogue If you believe that talking about race is impolite, or that "colorblindness" is the preferred approach, you must read this book. Race Talk and the Conspiracy of Silence debunks the most pervasive myths using

evidence, easy-to-understand examples, and practical tools. This significant work answers all your questions about discussing race by covering: Characteristics of typical, unproductive conversations on race Tacit and explicit social rules related to talking about racial issues Race-specific difficulties and misconceptions regarding race talk Concrete advice for educators and parents on approaching race in a new way "His insistence on the need to press through resistance to have difficult conversations about race is a helpful corrective for a society that prefers to remain silent about these issues." —Christopher Wells, Vice President for Student Life at DePauw University "In a Canadian context, the work of Dr. Derald Wing Sue in *Race Talk: and the Conspiracy of Silence* is the type of material needed to engage a populace that is often described as 'Too Polite.' The accessible material lets individuals engage in difficult conversations about race and racism in ways that make the uncomfortable topics less threatening, resulting in a true 'dialogue' rather than a debate." —Darrell Bowden, M Ed. Education and Awareness Coordinator, Ryerson University "He offers those of us who work in the Diversity and Inclusion space practical tools for generating productive dialogues that transcend the limiting constraints of assumptions about race and identity." —Rania Sanford, Ed.D. Associate Chancellor for Strategic Affairs and Diversity, Stanford University "Sue's book is a must-read for any parent, teacher, professor, practitioner, trainer, and facilitator who seeks to learn, understand, and advance difficult dialogues about issues of race in classrooms, workplaces, and boardrooms. It is a book of empowerment for activists, allies, or advocates who want to be instruments of change and to help move America from silence and inaction to discussion, engagement, and action on issues of difference and diversity. Integrating real life examples of difficult dialogues that incorporate the range of human emotions, Sue provides a masterful illustration of the complexities of

dialogues about race in America. More importantly, he provides a toolkit for those who seek to undertake the courageous journey of understanding and facilitating difficult conversations about race."

Gene transfer research is a rapidly advancing field that involves the introduction of a genetic sequence into a human subject for research or diagnostic purposes. Clinical gene transfer trials are subject to regulation by the U.S. Food and Drug Administration (FDA) at the federal level and to oversight by institutional review boards (IRBs) and institutional biosafety committees (IBCs) at the local level before human subjects can be enrolled. In addition, at present all researchers and institutions funded by the National Institutes of Health (NIH) are required by NIH guidelines to submit human gene transfer protocols for advisory review by the

NIH Recombinant DNA Advisory Committee (RAC). Some protocols are then selected for individual review and public discussion. Oversight and Review of Clinical Gene Transfer Protocols provides an assessment of the state of existing gene transfer science and the current regulatory and policy context under which research is investigated. This report assesses whether the current oversight of individual gene transfer protocols by the RAC continues to be necessary and offers recommendations concerning the criteria the NIH should employ to determine whether individual protocols should receive public review. The focus of this report is on the standards the RAC and NIH should use in exercising its oversight function. Oversight and Review of Clinical Gene Transfer Protocols will assist not only the RAC, but also research institutions and the general public with respect to utilizing and improving existing oversight processes.
