JE Howell Model Engine Plans

Overview. Lee Hodgson ' s late father, Sam, created this wonderful scale engine beginning way back in 1936. Lee has reworked the plans, and now offers a thick tome of CAD drawings and all the necessary information to re-create one of these masterpieces available at Ageless Engines.com. With thousands of construction hours, it is truly a masterpiece of both skill and perseverance.

Ageless Engines

Note: This model is a correction to the original 8 cylinder radial engine model I built before. I realized after publishing the previous version that 4 stroke radial engines need to have odd number of cylinders. As a correction, I modified the the cylinder block to have 7 cylinders instead of 8. Most of the parts are identical to the previous one, so if you have already built the 8 cylinder ...

...
The radial engine is
a design unlike any
typical automotive
engine, in that it
uses a centrally-
located crankshaft
that drives the
connecting rods
through the use of
a master
connecting rod that
is directly
connected to the
crankshaft and
typically used in the
upward-facing
cylinder.

The radial engine is
a reciprocating type
internal combustion
engine
configuration in

which the cylinders
"radiate" outward
from a central
crankcase like the
spokes of a wheel.
It resembles a
stylized star when
viewed from the
front, and is called a
"star engine" in
some languages
(German
Sternmotor, French
moteur en étoile,
Japanese ??????
(hoshigata enjin),
Italian motore
stellare).
