A step-by-step guide that shows you "How to Catch a Cheater Red handed"; written by a private investigator with over 20 years of experience of real-time field experience who has participated in hundreds of divorce and child custody cases and spoken to thousands of witnesses, victims, and cheaters. This complete manual pickups where all other other "catch a cheater" books leave off. This manual was written in layperson's terms for the person that wishes to conduct his or her own investigation and details many of the tools and techniques that are routinely used by licensed private investigators to catch cheaters in the act. It also contains suggestions for lower-cost alternatives to expensive spy gear and surveillance equipment that I have used in the field and found to perform satisfactorily.

This report is a user's manual for the CorDos 1.2 Disk Operating System as used by the Naval Supply Systems Command's Computer Aided Warehouse Design System. CorDos 1.2 is operational on the Radio Shack Model II microcomputer. Under CorDos, the capability of the Computer Aided Warehouse Design System to produce voice and printed output in addition to normal screen display and printed output is maintained. Voice output was designed into the workstation to allow use of the workstation by a totally blind user who could not function independently at the workstation without voice output. For users not requiring voice output, CorDos functions without any loss of capabilities. This users manual describes CorDos for use with and without voice output. Keywords: Corvus Hard Disks.

### New York Magazine

The authors were part of a community of small software entrepreneurs who created the first applications for personal computers, as the computer revolution in the late 1970s and early 1980s changed the way we create and store documents and data. They personally knew many of the principle players whose accomplishments are the stuff of legends, and whose work and vision led the way to our computer-saturated society. This book captures this unique era, through the stories of eye-witnesses, when personal computing was just an idea -- an idea whose time had come! In these pages you will learn how a young engineer named Steve Leininger, working alone, built the first TRS-80 microcomputer . He had been hired by Tandy Corporation to develop a computer product to be sold in their Radio Shack stores for a price their customers could afford. Development costs were less than \$150,000. Yet no one had ever sold a complete off-the-shelf personal computer before. Would anyone buy it? As it turned out, the desire for a computer of one's own was overwhelming! Author David Welsh was one of the hobbyists-turned-programmers who bought a TRS-80. Using self-taught programming skills, he created a word processor and he and his wife Theresa found themselves in business, selling their product worldwide to enthusiastic fans who were eager to throw away their typewriters. They were part of the leading edge of the software business, joining hundreds of other small entrepreneurs selling software out of garages, basements and whatever space they could rent cheap. David and Theresa Welsh tell their own story and that of many other pioneers. Includes over 100 illustrations of early

computer products and ads.

"The author traces the emergence in the late 1970s and early 1980s of the belief that personal computers should be easy to use. He asks readers to consider the consequences of a computational culture grounded in the assumption that the average person does not need to know much, if anything, about the internal operations of the computers we have come to depend on"--
