He started to tell stories about Thomas the Tank Engine and his friends in order to entertain his son Christopher. Those stories have now gone on to entertain generations of children around the world. A convinced pacifist, Awdry was thrown out of one curacy and denied another during World War II, because of his beliefs. He was a man of courage, who believed that you should live by certain rules. He built his imaginary world on the island of Sodor on these rules, and showed how those who transgressed them would always be "punished, but never

scrapped," as he said. The Thomas the Tank Engine Man is a charming biography and a fascinating insight into the life of Reverend W. Awdry. First published 20 years ago before the Britt Allcroft/Ringo Starr animations took Thomas to a worldwide TV generation, this biography is now fully revised and updated. Branch Line Engines Lion Books Mountain Engines Egmont Books (UK) Train Pen and Sword Transport The Liverpool & Manchester Railway was Britain 's first mainline, intercity railway; opened in 1830 it was at the cutting edge of railway technology.

Engineered by George Stephenson and his team – John Dixon, William Allcard, Joseph Locke – the project faced many obstacles both before and after opening, including local opposition and the choice of motive power, resulting in the Rainhill Trials of 1829. Much of the success of the line can be attributed to the excellence of its engineering but also its fleet of pioneering locomotives built by Robert Stephenson & Co. of Newcastle. This is the story of those locomotives, and the men who worked on them, at a time when the locomotive was still in its infancy. Using extensive archival research, coupled with lessons learned from operating early replica locomotives such as Rocket and Planet, Anthony Dawson explores how the

locomotive rapidly developed in response to the demands of the first intercity railway, and some of the technological dead ends along the way.

The technology underlying steam trains was one of the foundations of the industrial revolution in the 19th Century, and although it has since been replaced, steam trains can still be found all over the world, preserved in railways and museums. This book describes their components, and how they work, and considers their development over 150 years, all over the world.

In the 19th century, steam-hauled trains had a virtual monopoly on transportation of passengers. After the 1914-1918 Great War, competition from highway vehicles, which had previously not troubled North American railroads to any considerable extent, began to provoke renewed interest in a more economical form of railway motive power, and a number of "rail buses" of varying designs were introduced. This book details how, in November 1925, CNR's new diesel-electric car No. 15820 completed its record-breaking run across the North American continent, from Montreal to Vancouver. The train established a new world's record for endurance, economy, and sustained speed over such a distance. The book explains how this comparatively small self-propelled vehicle led to their wide-spread usage across the

Canadian National system, and its rival, the Canadian Pacific Railway. The book describes how, despite the growing popularity of automobiles, and increasing availability of better roads, these new rail cars were successful in stemming the decline in rail passenger patronage, particularly on low-traffic branch lines. There were many types of these specialised vehicles that are fully described in the book, which contains interesting details on a very important part of Canada's railway heritage, with over 100 photographs and illustrations, including many extremely rare photos in full colour.

The impact of constant technological change upon our perception of the world is so pervasive as to have become a commonplace of modern society. But this was not always the case; as Wolfgang Schivelbusch points out in this fascinating study, our adaptation to technological change—the development of

our modern, industrialized consciousness—was very much a learned behavior. In *The Railway Journey*, Schivelbusch examines the origins of this industrialized consciousness by exploring the reaction in the nineteenth century to the first dramatic avatar of technological change, the railroad. In a highly original and engaging fashion, Schivelbusch discusses the ways in which our perceptions of distance, time, autonomy, speed, and risk were altered by railway travel. As a history of the surprising ways in which technology and culture interact, this book covers a wide range of topics, including the changing perception of landscapes, the death of conversation while traveling, the problematic nature of the railway compartment, the space of glass architecture, the pathology of the railway journey, industrial fatigue and the history of shock, and the

railroad and the city. Belonging to a distinguished European tradition of critical sociology best exemplified by the work of Georg Simmel and Walter Benjamin, *The Railway Journey* is anchored in rich empirical data and full of striking insights about railway travel, the industrial revolution, and technological change. Now updated with a new preface, *The Railway Journey* is an invaluable resource for readers interested in nineteenth-century culture and technology and the prehistory of modern media and digitalization.

The story of a young Chinese girl

who arrives in North America only to discover that her father has died building the railway. This powerful, unforgettable and multi-award-winning tale is based on the lives of the Chinese who settled on the west coast of North America in the early 1900s. Left behind in China by her father, who has gone to North America to find work, Choon-yi has made her living by selling her paintings in the market. When her father writes one day and asks her to join him, she joyously sets off, only to discover that he has been killed. Choon-yi sees the railway and the giant train engines that her father died for, and she is filled with an urge to paint them. But her work disappoints her until a ghostly presence beckons her to board a train where she meets the ghosts of the men who died building the railway. She is able to give them peace by returning their bones to China where they were born. Ghostly, magical and yet redeeming, this tale by Paul Yee is superbly illustrated by Harvey Chan.
