Next, you will learn all the basics of doubleweave techniques, as well as tips and tricks of setting up the warp, and a variety of doubleweave specialty techniques all shown through detailed process photography and a wealth of swatches demonstrating different effects. Specialty techniques are shown for 4-shaft and 8-shaft looms. The weaving effects covered include lace, tubular weave, pick-up, color mixing, and more. And since doubleweave showcases color and pattern in unique ways, you will learn how to use these to great effect in your cloth designs. A leader in educational technology separates truth from hype, explaining what tech can—and can’t—do to transform our classrooms. Proponents of large-scale learning have boldly promised that technology can disrupt traditional approaches to schooling, radically accelerating learning and democratizing education. Much-publicized experiments, often underwritten by Silicon Valley entrepreneurs, have been launched at elite universities and in elementary schools in the poorest neighborhoods. Such was the excitement that, in 2012, the New York Times declared the “year of the MOOC.” Less than a decade later, that pronouncement seems premature. In *Failure to Disrupt: Why Technology Alone Can’t Transform Education*, Justin Reich delivers a sobering report card on the latest supposedly transformative educational technologies. Reich takes readers on a tour of MOOCs, autograders, computerized “intelligent tutors,” and other educational technologies whose problems and paradoxes have bedeviled educators. Learning technologies—even those that are free to access—often provide the greatest benefit to affluent students and do little to combat growing inequality in education. And institutions and investors often favor programs that scale up quickly, but at the expense of true innovation. It turns out that technology cannot by itself disrupt education or provide shortcuts past the hard road of institutional change. Technology does have a crucial role to play in the future of education, Reich concludes. We still need new teaching tools, and classroom experimentation should be encouraged. But successful reform efforts will focus on incremental improvements, not the next killer app.
