The authors main hypothesis is: 'While microbial life may be common in the universe, complex life (animals, plants, etc.) would be very rare' and Rare Earth explains why this may be so. In our own Solar System, the discovery of microbes on any of our planets or moons would tend to support their idea while the Are we alone? Rare Earth proponents argue that a planetary system capable of sustaining complex life must be

structured more or less like the Solar System, with small and rocky inner planets and outer

gas giants. Without the protection of 'celestial vacuum cleaner' planets with strong

gravitational pull, a planet would be subject to more catastrophic asteroid collisions.
