by Step - The Biology

Corner

Place the rat on its back,
on a dissection pad, and
stretch out and pin the four
limbs to the pad. Start the
dissection by removing the
skin. Using forceps to lift
the skin, carefully cut
away with the scissors,
take care not to cut too
deep. Start at the top of
the chest and cut towards
the tail end, avoiding the
genital area.

Rat External Anatomy

Step 1: In the biology lab, you will be working with specimens that have been preserved in chemicals and you will be working with sharp instruments. Before you start, obtain safety goggles, and nitrile gloves. Nitrile gloves come in different sizes, most women will wear a medium and most men will wear a large.

Rat Dissection Guide Answers

Rats are often used in dissection classes because they are readily available and they possess the typical mammalian body plan. Most of what you learn on the rat is applicable to the

anatomy of other mammals, such as humans. EXTERNAL FEATURES Refer to the drawing below and identify the indicated structure on the rat prior to skinning.

Including pregnant female - VWR International

1) Obtain a rat from your teacher and remove it from the original storage bag and throw away the original storage bag. 2) Place the rat on the dissecting tray so it looks like the diagram below. Identification and Diagram Labeling: You are responsible for knowing the location of the following terms. Locate each term using your Dissection Guide. Label them on the

diagram below and/or describe their location in the notes section of the table.
