The rest of the lesson will include a Guided Practice session of several applications of Rational Exponents in expressions. I always give students the opportunity to work on problems before we discuss them as a class. After rewriting a few in either radical or exponential form, we simplify basic rational exponents where the base is a number.

Rational Exponents 7-3 Solve Exponential Equations In an exponential equation, variables occur as exponents. Use the Power Property of Equality and the other properties of exponents to solve exponential equations. Solve $102 \ 4 \ x \ ? \ 1 = 4.$ $102 \ 4 \ x \ ? \ 1 = 4$ Original equation $(\ 4 \ 5) \ x \ ? \ 1 = 4$ Rewrite 1024 as $4 \ 5.$

Hopefully the answer is YES, and hopefully they're correct! (If not, I'll need to intervene much more explicitly.) Also, be sure to bring up the fact that we'll run into problems if the base is not positive! Finally, we will make another entry in our list of "Properties of Exponents" to formalize the meaning of rational exponents.

Definition of Rational Exponents. So far, exponents have been limited to integers. In this section, we will define what rational (or fractional) exponents The fractional exponent m/n that indicates a radical with index n and exponent m : $a^{m/n} = \sqrt[n]{a^m}$. mean and how to work with them. All of the rules for exponents developed up to this point apply.
